Reducing Costs Of Government

The proposal for the amalgamation of the three prairie provinces of Canada into one large provincial unit recently advanced by Premier Bracken of Manitoba, and supported by Hon. Mr. Justice Turgeon of Saskatchewan, does not, it would appear, command very general or enthusiastic support on the part of the people in the area affected. It has only aroused a certain academic interest in much the same way as similar proposals in regard to three much smaller Maritime Provinces have been received at varying periods since Confederation.

This lack of interest in, and support for, the idea of one big province does not, however, presuppose a complete satisfaction on the part of the people with the present unduly heavy costs of governmental administration in this country. That there is a keen and very much alive interest in this larger problem is made manifest in many ways.

There are, for example, the proposals before Legislatures in certain of the Prairie and Maritime Provinces for a reduction in the membership of those bodies. In Saskatchewan, at the time of writing this article, a bill is under consideration reducing the number of members in the Legislature from 63 to 52. The effect of such reduction, if it is made effective, will be a saving of from $20,000 to $25 000 a year. Such a saving is, of course, worth while,—as all savings are whether large or small,—but, unless accompanied with many other savings in legislative and admin'strative costs, will not go very far towards meetnig the objection that we are over-governed in Canada. Much more than cutting the size of legislatures must be done.

The writer is convinced that it is not in the union of two or three provinces into one, nor in the mere reduction in numbers of the membership of legislatures, that substantial and therefore reallyworthwhile savings can be brought about. It is not a few thousands of dollars in the costs of government in Canada that should be saved, but millions. Can economies be effected that will save these millions to the taxpayers without impairing services to the people or efficiency in their administration? We believe they can.

But mere criticism of existing conditions, even when coupled with expressions of beliefs that they can be bettered, is not convincing unless accompanied by practical suggestions looking to reforms and a betterment of conditions. Anybody can criticize; destructive criticism is easy, but constructive suggestion and performance is an entirely different and a much more difficult matter, especially as all such action has to meet and overcome long-established and presently existing conditions.

Not in revolution, therefore, but in evolution, and particularly at this time in co-ordination of services, in co-operation between governments looking to an amalgamation of services rather than in an amalgamation of governments and provinces, is to be found a practical, ready-to-hand method of saving not thousands but hundreds of thousands of dollars.

To illustrate: Canada with a Federal and nine Provincial Governments has ten departments or bureaus dealing with agriculture; ten dealing with public health; ten dealing with company incorporation, company law, company inspection, company taxation, including banks, railways, loan, mortgage and insurance companies; ten having to do with administration of justice; ten levying, or having the power to levy, income taxes, etc., etc. The result is, of course, constant conflict of authority, duplication of services, much unnecessary expense, and interference with and the irritation of the people generally.

Everybody realizes the situation, but governments, like individuals, are loth to relinquish any powers or rights they possess, they are jealous of these things and zealous in retaining every atom of control over them. Even within a government, it is difficult to re-organize departments to meet changing conditions because one department opposes the transfer of any branch of its work to another department, and the more highly organized and independent a Civil Service becomes, the more bureaucratic does it become.

To illustrate again: The enforcement of law and administration of justice within a Province is the duty of the Provincial authority. Hence it must have a police force. But the Federal authority is responsible for the enforcement of its own Customs, Excise, Immigration, Postal, and similar laws, and is responsible for the administration of Indian affairs. So it, too, must have a police force. Then the cities and larger towns are responsible for the enforcement of their own by-laws. So they, too, have police forces.

Four or five years ago the Government of Saskatchewan entered into an arrangement with the Federal Government whereby they disbanded the Saskatchewan Provincial Police, and the Royal Canadian Mounted Police, a Federal body, policed the Province in addition to discharging its own Federal duties. The Province pays the Dominion a lump sum annually for this work, but it is saving some hundreds of thousands of dollars annually as compared with the cost of maintaining a separate police force of its own. Recently Alberta and Manitoba have made similar arrangements with the Federal Government. Thus without any union of governments or legislative bodies, without surrender of any Provincial right or authority, without any curtailment in service or any impairment in efficiency, millions of dollars will to the Dominion.

be saved to the taxpayers of these three provinces, and without increase cost

It is the writer's conviction that the same policy can be developed in many ways and made to apply in other branches of Federal and Governmental services. In some cases, perhaps, Provincial governments could surrender certain authority now possessed by them to the Dominion exclusively, and, vice versa, the Dominion might surrender certain authority possessed by them to the Provinces exclusively. These things might be done to the mutual advantage of both and certainly to the benefit of the hard pressed Canadian taxpayer. But, even in the absence of such actual surender, surely it is possible by co-operation, co-ordination, even amalgamation of services, to enormously reduce the present costs of governmental administration throughout this Dominion. It can be done if there is only the will to do it.

Seems Hardly Cricket

United States Encourages Indians To Speak Against Great Britain

We note another native Indian has been telling the good folk of Philadelphia what a wicked administration is given India by the British. He was debating with an Englishman who upheld the British rule. It seems to be one of the hobbies in the United States at the moment to flood the country with native Indians to speak against Great Britain. It may amuse the Americans, but it hardly seems to be cricket for them to encourage that sort of thing.—Border Cities Star.

Use Of Electricity

Now Generally Available In City and Country In Most Parts Of Canada

The use of electricity is now so common in Canada that it is difficult to conceive of using any other means of lighting in homes, stores, factories and streets in any urban municipality of any size. Hydro-electricity is rapidly supplanting steam as a source of power in factories, quarries and mines. The latest available figures show that there are in Canada about 400 commercial organizations and 466 municipalities distributing electric energy to about 1,300,000 domestic service customers, 234,000 commercial light customers and over 28,000 power customers, and to over 1,540 municipalities for street lighting. The average cost in Canada per kilowatt hour for all domestic uses was in 1930 a fraction over three cents; in some urban centres, Ottawa and Winnipeg for examples, the cost averages less than one cent per kilowatt hour, for a monthly consumption of 300 kilowatt hours, and still less for higher consumptions.

The new Manchurian state created in Asia has a population of more than 33,000,000.

Great Britain now has nearly 4,350,000 licensed radio receivers.

Research Scholarship Awards

Names Of Many Westerners Appear On List Which Has Been Approved

This year's scholarship awards of the National Research Council number 22, of a total value of $16,150. There were 117 applicants.

Successful candidates recommended by the scholarship committee of the council include:

Fellowships ($1,000)—J. F. Allen (University of Manitoba), 117 Harvard Avenue, Winnipeg, to be held in physics department, University of Toronto; E. G. Hallonquist, 1021 Eighth Avenue, New Westminster, to be held in Department Cellulose Chemistry, McGill University; R. N. H. Haslam (Saskatchewan), 3540 Hutchison Street, Montreal, to be held in Physics Department, McGill University; Carl A. Winkler (University of Manitoba), Virden, Man., to be held in Department Physical Chemistry McGill University.

Studentships ($750)—J. F. Caley (Alberta and Toronto)—109th Street, Edmonton, to be held in Geology Department, Toronto University; G. A. Harcourt (mining geology), University of Alberta, 117th Street, Edmonton, Alberta, to be held in Department of Geology, Queen's University, Kingston.

Miss E. M. Lyons (Manitoba), 1079 McMillan Avenue, Winnipeg, to be held in Department of Biology, University of Toronto; H. Borden Marshall, 1415 Eighth Avenue, New Westminster, to be held in Department Cellulose Chemistry, McGill University.

J. H. L. Truscott (Saskatchewan), Alameda, Saskatchewan, to be held in Department Plant Pathology, University of Toronto, Toronto, Ont.

Bursaries ($600)—A. B. Van Cleave (Saskatchewan), Estuary, Sask., to be held in Department of Physical Chemistry, University of Saskatchewan.

Three of the successful candidates secured their undergraduate training at the University of British Columbia, two at the University of Alberta, three at the University of Saskatchewan, three at the University of Manitoba, two at the University of Toronto, one at the University of Western Ontario, four at Queen's University, one at McGill University, two at Dalhousie University, and one at Laval University.

When the National Research Council was appointed, it found that one of the first requirements for the development of scientific research in Canada was the building up of a corps of research workers, thoroughly trained in science and competent to undertake independent investigation of scientific problems.

In order to meet this requirement, the council immediately established three classes of post-graduate scholarships in science, namely, bursaries, studentships and fellowships, having an annual value of $600, $750 and $1,000, respectively. These awards are intended to enable students who have graduated with distinction from a university to continue their training in science until they have qualified for a Ph.D. degree. Three years is the maximum assistance granted to any individual candidate under any combination of these awards.

These scholarships are awarded to the best qualified applicants. The minimum qualification for a bursary is graduation with distinction from an approved university. An applicant for a studentship must have had at least one year of post-graduate research experience, while fellowships are awarded only to persons who possess very high qualifications and who have demonstrated beyond question their ability to carry on independent research.

Conditions Improving

Survey Of Economic Position Of Canadian People Is Hopeful

Prospects of improvement in the economic position of the Canadian people are seen in the monthly letter of the Canadian Bank of Commerce, which points to better conditions in agricultural areas, depletion of stocks in the fishing industry and the yearly advent of the tourist season.

Survey of conditions in various agricultural areas of the country undertaken by the bank indicate improved moisture conditions while the same sources reveal "a steady recovery in the position of farmers (in the prairie provinces) and that a general adjustment to change conditions has taken place."

The letter notes stocks of fish held as storage are now moving into consumptive channels and sees the new season opening "without the handicap of abnormally large stocks, as was the case last year."

Noting recent reductions in ocean rates, which it suggests may divert some tourist traffic from Canada, the letter sees in them the possibility of attracting to this country, in conjunction with steamship companies, a trans-oceanic tourist trade with beneficial results both to the Dominion and to the shipping industry.

Dwarfs were objects of great interest to the ancient Romans, and artificial dwarfing was sometimes practised.

Several hundred Indians farmers recently witnessed the plowing of a field by a radio operated tractor.

In Peru non-voting citizens are not allowed to hold public office, sign legal documents or obtain passports.

Automatic Radio Is Demonstrated In Paris

Does Away With Necessity Of Trained Wireless Operator

An automatic radio, immensely simplifying the process of sending messages, was demonstrated at Paris by its inventor, Jacques Detruisenx, before representatives of the Ministries of War, Post, and Telegraphs, Merchant Marine and Public Works.

The apparatus can be operated by any one knowing how to read, obviating the necessity of a trained wireless operator. It works by means of knobs, which are turned like the knobs on a radio receiving set. The letters of the alphabet and various signals are printed on a dial turned by a knob, messages thus being spelled out.

The apparatus is small and light enough to be carried anywhere, permitting its use on airplanes, submarines and fishing smacks and at meteorological stations and army posts. Provision is made in the case of submarines to carry a buoy equipped with the new apparatus, and in case of accident the buoy is released and continues to send out SOS calls for as long as twenty-five hours. In case of any sort of wreck the device permits sending calls for help without the necessity of the operator sticking to his post.

Antidote For Deadly Gases

Experimenter Believed To Have Succumbed From Effects Of Scientific Tests

A remarkable scientific discovery which may have a profound effect on moden chemical warfare was reported by the London Sunday Express, England, which also indicated that the discoverer of the secret may have died a martyr to his work.

The newspaper said the chemical defense research department of the war office had discovered an effective antidote for all gases used in modern warfare. The department had been experimenting for 14 years in an effort to achieve such a formula.

Military volunteers risked their lives by walking in areas filled with deadly gases, the newspaper said. They were affected by the gases, but recovered immediately from the effects when the antidote was applied.

Major W. R. Calwey, who died March 6th, was the chief expert conducting the experiments. The Express said he died without realizing the success which had been achieved, and that his death, which was said to have been due to pneumonia, may have been a result of gas poisoning.

Want Rates Published

Ask For Information Regarding Rates From Churchill To Prairie Points

Publication of merchandise class rates from Churchill, the terminus of the Hudson Bay Railway, and prairie points has been urged upon the management of the Canadian National Railways, R. J. Manion, Minister of Railways, informed the House of Commons. In answer to a question by C. R. McIntosh (Liberal, North Battleford), Dr. Manion stated that he had taken up the matter recently with Sir Henry Thornton, and impressed upon him the importance of early action.

Radio Telephone

New Invention Of Signor Marconi Is Tested Out

Guglielmo Marconi has developed a completely successful ultra short wave radio telephone capable of both receiving and sending, according to witnesses who attended a test conducted by him recently. Baron Cenclo Masson, mayor of the town of Levanto, Italy, who was among the witnesses, said the new radiophone could establish contact with an ordinary telephone system. Hence a person with the radiophone could converse with anyone on a wire telephone circuit.

Furniture Factories

Furniture manufactured in Canada in 1930 was valued at $36,866,195. There are 366 establishments in the Dominion listed in the furniture industry, of which 213 are in Ontario, 71 in Quebec, 35 in British Columbia, 24 in Manitoba and the remainder in the other provinces. About 12,000 persons are employed in the industry.

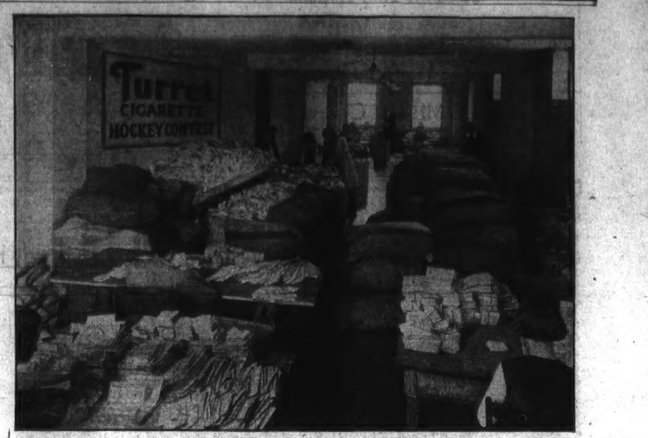

More than 150 breakfasts, lunches, and dinners are served to various members of the royal retinue of Buckingham Palace, London every day.

With all these boasted modern improvements, it's still necessary to wind one's watch every night.

Bank bandits are active in Scotland.

W. N. U. 1997

Turret Cigarette Hockey Contest Headquarters Staff

Sorting the Millions of Entries Received

The scene illustrated above will give our readers a slight idea of the vast number of entries received in the Turret Cigarette $15,000.00 Cash Prize Hockey Contest. Well over three million entries were sent in, bearing the post mark of March 5th, or a prior date, which was a condition binding upon all contestants desiring to qualify for one of the 289 cash prizes. The enormous task of judging these millions of entries is going forward as rapidly as possible. According to the latest reports from Contest Headquarters, it will be possible to publish the complete list of prize winners about the latter part of April.

Proposed Water Reservoir

Suggested Plan To Conserve Moisture In Southern Saskatchewan

Formation of a large water reservoir at Buffalo Lake by the construction of a dam on the Qu'Appelle River, 20 miles from Moose Jaw, was advocated by T. C. Main, A.M.E.I.C., consulting engineer for the Saskatchewan drouth commission in an address given at Moose Jaw.

Mr. Main's proposal will be placed before the provincial govenment as a recommendation in his report. The reservoir would be about 25 miles in length and three-quarters of a mile wide. The reservoir would be an effective means of conserving water for southern Saskatchewan, Mr. Main said.

He also suggested, that despite present opposition, the Saskatchewan River water diversion scheme would go through within the next few years.

Mr. Main pointed out that the precipitation in northern Saskatchewan last year was not a great deal more than in the south and while the rainfall in the north had been conserved, it had drained off rapidly in the southern parts.

Reduced By Asthma. The constant strain of asthma brings the patient to a dreadful state of hopeless exhaustion. Early use should by all means be made of the famous Dr. J. D. Kellogg's Asthma Remedy, which more than any other acts quickly and surely on the air passages and brings blessed help and comfort. No home where asthma is present in the least degree should be without this great remedy.

Better Market For Wheat

Increased Demand In the World Market For Canadian Grain

The Royal Bank of Canada, in its monthly news letter, says there is prospect of increased demand in the world market for Canadian grains.

Citing reduction of import restrictions in France, Germany and Italy and reported famine conditions which, it suggests, will probably keep Soviet Russia out of the export market for some time, the bank's letter forecasts reduction of carry-over and grain in storage in several parts of the world may bring about increased activity in Canadian wheat exporting circles.

The farmer in western Canada, the letter says, will enter the coming wheat season, under more favorable conditions than have prevailed for some time. Reduction in acreage for spring sowings of wheat may be expected due to difficulty in securing seed grain, it adds.

Historic Sword Sold

Was Presented To Sir John French After Boer War

A field marshal's sword, sheathed in solid gold and with a gold diamond-studded hilt, has been sold to the London Bullion Company by persons taking advantage of the present monetary situation to profit by gold disposal. It was understood that the sword was the one presented to the late Earl of Ypres, then Sir John French, after the Boer War. The blade was presented by the citizens of Kimberley in 1901 in gratitude for the action of the earl, who led a series of calvary charges to lift the siege of the city. The new owners said they had no intention of melting the sword, but probably would offer it to the citizens of Kimberley.

Son—"Dad, what's a matrimonial bureau?"

Dad—"It's a bureau, son, with six drawers packed full of women's fixings and one man's necktie."

The largest motor-coach station in the world is being built at Victoria, London, and will handle 100 vehicles an hour.

A flying club for newspaper men only has been formed in England.

New Pyramid Found

Built About 2800 B.C. Only the Base Remains

Egypt rocks with excitement over a fresh find. A pyramid, built about 2800 B.C., is discovered in the Gizeh sands. Its base, of 5,000 square yards makes it rank along with the big three. It may contain the sarcophagus of Miss Cheops. Only the base remains, the rest having been carried away—perhaps to be used in other pyramids. Ancient builders were that odd. The Egyptians destroyed to build anew. Their unwitting contemporaries the Mayas of Yucatan built one magnificent temple squarely upon another.

As a vermifuge an effective preparation is Mother Graves' Worm Exterminator, and it can be given to the most delicate child without fear of injury to the constitution.

"Death-Ray" Experiments

Tests Being Made So Far Have Been Quite Harmless

Favorite among the projects of inventors of war devices is a "death-ray" that will kill enemies at a distance. The few who have claimed any progress toward such a ray have tested it harmlessly by stopping automobile motors or by setting off explosive charges at a safe distance. The latest of these is Kurt Schimkus, a chemist of Berlin. He succeeded recently in exploding a mine two hundred yards away.

Douglas Egyptian Liniment is recommended for sore necks, galls, distemper, calluses and spavins. Removes proud flesh and Hoof Rot. Stops bleeding instantly.

An all-glass house that is asserted to exclude air, dirt, and bacteria, has been built by a scientist in Japan, ventilation being provided by air pumped from a distant point through filters.

Buses will replace all street cars in Middlesborough, England.

Navy blue bowler hats for men are appearing in Paris.

Canada's Economic Outlook Brighter

Improvements In Wheat, Cattle, Lumber and Nickel Exports

Bright prospects with the advent of Spring, in Canada's economic situation are noted in a statistical review issued recently by the Department of Trade and Commerce. The review covered statistical reports issued by the Dominion Bureau of Statistics and the "bright spots" include:

A hopeful export outlook for Canadian wheat shown by world statistics.

Early Spring shipments of Canadian cattle to Great Britain have been well received.

Canadian cattle markets are showing increased strength.

Exports of Canadian lumber show a substantial seasonal increase.

Shipments of nickel, particularly to the United Kingdom, are on the increase.

Domestic production of gold, petroleum natural gas show a decided improvement.

Utilizing Cherry Stones

Usefulness Of Every Part Was Discovered By Accident

After accidentally stepping on a cherry stone and observing the greasy spot left on the floor, an orchardist and canner now uses the pits as well as the fruit. The oil in the kernels is pressed out and used in the making of cosmetics, the left-over cake in the press is sold for fertilizer, and the shells are utilized for fuel.

First Lipton Shop Closed

After 60 years of activity the first shop to be opened in Glasgow, Scotland, by Sir Thomas Lipton, has been closed. The shop was started by Lipton with a slender capital on his 21st birthday after his visit to America. Lipton ran it personally, sleeping under the counter at night. The business was transferred to other Lipton branches.

The most important rules to follow in removing stains are to treat the stain when fresh and to apply simple methods first.

"FATIGUE? I just postpone it!"

"No, I don't have 'nerves.' You can't have them, and hold this sort of position. My head used to throb around three o'clock, and certain days, of course, were worse than others.

"Then I learned to rely on Aspirin."

The sure cure for any headache is rest. But sometimes we must postpone it. That's when Aspirin saves the day. Two tablets, and the nagging pain is gone until you are home. And once you are comfortable the pain seldom returns!

Keep Aspirin handy. Don't put it away, or put off taking it. Fighting a headache to finish the day may be heroic, but it is also a little foolish. So is sacrificing a night's sleep because you've an annoying cold, or irritated throat, or grumbling tooth, neuralgia, neuritis. These tablets always relieve. They don't depress the heart, and may be taken freely. That is medical opinion. It is a fact established by the last twenty years of medical practise.

The only caution to be observed is when you are *buying* Aspirin. Don't take a substitute because it will not act the same. Aspirin is made in Canada.

BAYER

Back To The Land Movement Is Now Well Under Way Throughout Most Of Dominion

Census figures show that rural dwellers represent but 46 per cent. of Canada's population, that 54 per cent. live in villages, towns and cities.

Census figures also show that Canada has 32,767 vacant or abandoned farms.

True, the census reveals that there are 725,344 occupied farms, representing a gain of 17,154, or a little more than two per cent. since 1921.

Nevertheless, and everything considered, the picture presented is not a satisfactory one, certainly gives no cause for complacency. Orators and publicists never tire of telling us that this is an agricultural country, that agriculture is our basic industry, that the strength of the nation must be in the soil. Yet while these things are true, or ought to be, we see an increasingly heavy proportion of our people drift to the cities. Forty years ago, in 1891, something like 32 per cent. of Canadians were in towns and cities, 65 per cent. on the land. With the turn of the century there began a trek to the cities, and notwithstanding the immigration of the early 1900's, plus the opening up of the West, the year 1911 saw the percentage of those on the land reduced to 54 per cent., while 1921 showed a practically even distribution as between urban and rural population. Now, ten years later, city dwellers are a majority. In five provinces — Ontario, Quebec, New Brunswick, Nova Scotia and Prince Edward Island—there has been a tremendous growth in vacant or abandoned farms. This at a time when we have acute unemployment, when millions are being spent for relief, when our large cities are over-crowded.

In these circumstances there must be encouragement in the knowledge that, prompted by good leadership, a back-to-the-land movement is presently under way throughout most of the Dominion. Wesley Gordon, who has pioneered the movement so far as the Federal Government is concerned, has achieved a striking success, and something of what he has done is revealed by Richard Churchill in the current issue of MacLean's Magazine. Thus:

"Mr. Gordon began his settlement scheme in the fall of 1930. Eighteen months have brought these results:

"Land to the value of $11,500,000 has been sold. The average price paid was $2,000. In all, 6,040 married men with families have been transferred from the ranks of the unemployed in the cities to the country; 12,682 single men who would soon have been in the bread line are now on the land. All told, nearly 43,000 people have been changed from needy urbanites to self-sustaining rural dwellers."

In addition, the province have their own back-to-the-land movements, and Quebec has taken 4,000 people from the cities, Ontario, 2,500, Saskatchewan over 1,000.

Let all of us hope that this movement grows; that it gains tremendously in momentum. Canada is one of the three greatest countries in the world in the matter of arable land; is able to offer a comfortable living to hundreds of thousands, to perhaps millions, willing to settle on farms. And a few extra hundred thousand Canadians on the soil would undoubtedly add to the strength and fibre of Canada as a nation.—Ottawa Journal.

Canada's Sugar Maples

Grow In Area From Maritimes To Lake Of the Woods

According to the Forest Service, Department of the Interior, the natural range of the sugar maple in Canada extends from the Maritime Provinces to the Lake of the Woods in Ontario. In the forest it may reach a height of over 100 feet, but ordinarily does not average more than 75 to 80 feet in height and 2 to 3 feet in diameter. It occurs either in pure stands or is found associated with other hardwoods. It is very tolerant of shade, and this ability enables it to reproduce and survive in competition with other species.

Eight hundred applications for patents on moving picture photography were made to the British patent office last year.

Roumania has established a foreign exchange clearing house.

"You here again? I told you I didn't want to see you again."

"I told the policeman that, but he wouldn't believe me!"—Pele Mele, Paris.

Has Its Bright Side

Economic Situation In Canada Is Not So Gloomy

It is very easy to look upon the gloomy side of the economic picture even where Canada is concerned, and most of us are prone to spend much time in lamenting our slow progress and the high rate of taxation. It affords some satisfaction upon occasion to take a peek at the other side of the picture and absorb some facts such as the following:

1. In 1931, Canada, in the matter of export trade, moved into fifth position among the nations of the world, and is exceeded in the field of exports by only Great Britain, the United States, France and Germany.

2. Canadian gold production in 1931 was valued at $35,457,000, setting up a new high record, and exceeding the 1930 production by a little over 27 per cent.

3. The Dominion Bureau of Statistics estimated that Canada's national wealth is now in the neighborhood of $30,840,000,000, with British and foreign investments in the country representing only slightly more than 20 per cent. of this amount.

Boys' and Girls' Farm Clubs

1,190 Clubs In Canada With Membership Of 21,000

It is estimated that there are now 1,190 clubs of farm boys and girls in Canada with a membership of nearly 21,000. These clubs, under competent leadership, engage in the study of a variety of projects relating to stock, field crops, fruit, management, etc. Just now they are taking an intense interest in the elimination contests for the choice of a team to represent each of the provinces of the Dominion in the junior grain judging competitions to take place at the World's Grain Exhibition and Conference at Regina in July, 1933.

The 4-H clubs of the United States, as well as juniors of many other countries, are also giving attention to the same matter. Any country, state or province may be represented at the finals in 1933.

DAY FROCK SMARTNESS FOR DAUGHTER WITH BUILT-UP WAISTLINE AND PUFFED SLEEVES

A model of exceptional loveliness is this pretty little frock for the junior. What is more, it is a style that is borrowed from the adult mode. It is of such smart sophistication, the type of dress that gives daughter a big thrill to wear.

And it's as cute as can be in cherry-red and white crepe silk print with plain cherry-red crepe.

It's darling too with the skirt of French blue linen with white linen bodice.

Rayon novelties are splendid for this model and so inexpensive.

Style No. 310 may be had in sizes 10, 12, 14 and 16 years. Size 10 requires 1¾ yards 39-inch for skirt, with 1 yard 39-inch for blouse.

Price of pattern 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

WIFE (anxious to do something to help): "Percy! Entice him round this way. I'll throw him a chocolate!"—The Humorist, London, England.

Beginning Of Architecture

Man Wanted To Protect Himself From Weather Say Historians

Historians of architecture tell us that man's first building efforts were for the purpose of protecting himself from the weather. He required shelter from the angry elements, and hence "the inclemency of the seasons was the mother of architecture." In his primitiveness he took the nests of birds and the lairs of beasts as his model, and the earliest hut was probably a mere arbour of twigs, afterwards covered with mud. Then huts were built of branches of trees and covered with turf. And there is every reason to suppose that the men who built shelters of this kind were agriculturists by occupation. The hunter on the other hand preferred a cave-dwelling, which protected him better from the attacks of his fellows or wild animals, while the shepherds who led a nomadic or wandering life, as some of them do today in Central Asia, naturally devised tents.

Queen Has Strong Box

Can Store Treasures In London Safe Deposit Vault

Forty feet below Piccadilly, the Queen on a recent Saturday locked with a golden key a steel box in which, if she desires, she can store her private treasures.

There are nine tests which any have to pass if he or she tried to even see the box, and if a shortcut were attempted, this would entail the opening of the 20-ton door, which is equipped with keyless combinations and is proof against drills, explosives, oxy-acetylene and electric heat. In addition there would be concealed bells, giving direct communication with the police, to circumvent.

The vault is part of the premises of the London Safe Deposit in Lower Regent Street, W., London, England.

One Way To Look

"Look here, Bogus," asked Col. White. "Do you happen to know where Ink Judson is just now?"

"Yassah! Yassah. Sho' does, rah." replied Brother Bogus. "He's asleep dis minute over dar in the shade of de lumber yard lookin' for a job, sah."

Mrs. Miggs: "Yes, most of the servants are as independent and as impertinent as they can be' Now, I believe it's best to take a young country girl and train her in the way she should go and then—"

Mrs. Biggs—"And then she goes!"

Zinc is a metal which has been used for many generations, but only within the past ten years has a systematic study of zinc and its properties been made.

A revival of vegetable home gardens this year is predicted.

Oldest Jockey In World

English Rider Saw His First Derby Ninety-Two Years Ago

The oldest jockey in the world, John Faulkner, of Appleford, Berks, England, celebrated his 104th birthday recently. He saw his first Derby 92 years ago, when he was a stable lad at Epsom.

He rode Dusty Miller in the Cesarewitch of 1856, his last steeplechase was at Abingdon, at the age of 74.

Despite his great age, he is still active, and numerous members of his family attended the celebrations.

He started riding in 1851, and for his first race he received three-pence. His mount was Rip Van Winkle.

During his career he has broken nearly every bone in his body.

Strange to say, he has never had a bet in his life and his allowance of beer is one glass a day. He is known all over Berkshire as "Johnny" Faulkner, and among his many friends is Lady Oxford, who is fond of getting him to tell tales about his racing career.

Learned Boring From Worms

Method Studied By Makers Of London's First Underground Railways

Ship worms, which cause much damage to piers and ship timbers, taught the makers of London's first underground railways how to bore and line their tunnels to resist water. The worm makes a boring about half an inch in diameter, lining it with a limelike substance to keep out the water in the damp wood in which it lives. When engineers made the first attempts at underground passages they had difficulty in keeping the water out of the London clay. By studying the ship worm they learned that they could keep the bore dry by lining it as they progressed. In boring its passage the worm bites away the wood which passes in small particles through its body.

Mount Revelstoke Park

On a boulder-strewn slope at the top of mount Revelstoke in Mount Revelstoke National Park, British Columbia, is found the Ice Box, a cleft in the rock forty feet long, four feet wide, and about ten feet deep. Filled with snow and ice, it is naturally protected from the sun by its rocky walls, and never lacks its frigid contents. Painted signs direct tourists to this natural phenomenon.

Hurried late arrival in railway carriage:

Er—do you mind if I smoke, sir?"

Irascible Colonel in the other corner:

No, sir! Burst into flames if you like!

A lighthouse is called a pharos from the ancient lighthouse which stood on the Island of Pharos in the harbor at Alexandria, Egypt.

Census Figures For Farms

Show Increase In Number Occupied In Prairie Provinces

That occupation of farm lands in Canada has increased in the Prairie Provinces during the 1921-31 decade sufficiently to show a net increase for the Dominion in spite of recessions for all eastern provinces, is one of the results emerging from a study of farm census figures as extracted from last year's census returns by federal statisticians.

The bulletin issued on the subject shows that the number of occupied farms in Canada increased during the decade by 17,154 in number or 2.4 per cent. This rate of increase, however, was materially less than that shown in the preceding decade when the numerical increase of 38,701 farms gave a percentage increase of 4.2 per cent.

Each of the western provinces during the 1921-31 decade showed an increase while Ontario, Quebec, New Brunswick, Nova Scotia and Prince Edward Island showed decreases. The percentages of change for each province during the period were: Prince Edward Island, 6 per cent. lower; Nova Scotia, 16.6 per cent. lower; New Brunswick, 7.4 per cent. lower; Quebec was lower by only 1.1 per cent., 36 of its counties showing increases ranging as high as 26.8 per cent.; Ontario was lower by 3.2 per cent. Of the western group Saskatchewan was up by 14.3 per cent.; Alberta gained 17.7 per cent., and British Columbia was up 18 per cent.

Detailed analysis of the Province of Ontario reveals that of its 55 counties, 14 show increases with a maximum increase of 808.7 per cent. in Cochrane County and a minimum of 5 per cent. in Perth County. The remaining 41 counties show decreases ranging from 35.2 per cent. in Temiskaming down to 2 per cent. in Peel, the net decrease for the province being 6,748 farms or 3.2 per cent.

It is explained in presenting the figures that a farm, for the census purpose, was every tract of land of one acre or more that in 1930 produced goods upwards of $50 in value or which was under crop or used for pasture in 1931. Vacant or abandoned farms were only those which had been cropped and later left unoccupied. The number of these in Ontario was shown at 4,574 against the total for the Dominion of 32,767 farms. Nova Scotia had 3,075. New Brunswick, 1,623. Quebec, 2,746. Manitoba, 6,444. Saskatchewan, 5,193. Alberta, 6,564 and British Columbia, 2,162.

Prospectors Are Ready

Over 200 Men In Great Bear Lake Area Awaiting Spring

The radium and silver area of Great Bear Lake, in Canada's sub-Arctic, harbors 200 men ready to start work on claims when the break-up pemits opening of the wealthy mineral field. As many more fortune-seekers are expected to enter the district when snow and ice have fled, according to R. W. Mackinnon, oil expert, who returned to Calgary after making a test of Imperial Oil wells at Fort Horman. The area from Echo Bay to Hunter Bay was practically covered with claims, Mr. Mackinnon said he was informed.

Wife (to husband driving his first car)—You really mustn't be so nervous, George. Remember, the other people on the road are just as frightened of you as you are of them.

Out of the 6,000,000 farms in the United States half are located on unimproved roads and another 2,000,000 have only dirt roads.

Eleven acres of glass are used in the walls and roofs of one wing of a new factory at Beeston, England.

CANADIAN MINING EXPERTS DISCUSS MINERAL POSITION OR BRITISH EMPIRE

The Canadian Institute of Mining and Metallurgy held its Thirty-third Annual Meeting at Montreal, April 5, 6 and 7, when the important question of the Mineral Position of the British Empire was discussed by Dr. Charles Camsell (lower right), Deputy Minister of Mines in Canada. In addition five Canadian geologists read papers which illustrated the problems and potentialities of the Canadian Mining Industry. His Excellency the Governor-General (centre), Patron of the Institute, was the Guest of Honor at the Banquet on April 7. Top left is Mr. F. W. Gray, Sydney, N.S., retiring President of the Institute, who played an important part in the proceedings, while top, right, is John A. Allan, Edmonton, Alberta, Professor of Geology at the University of Alberta, who is the President-elect. Lower left is Hon. W. A. Gordon, Canadian Minister of Labour and Mines, who was among the distinguished guests present.

British Scientists To Head Expedition To Northern Canada To Study Aurora Of Arctic

Announcement is made that J. M. Stagg, noted meteorologist, will lead a British expedition of six men to Fort Rae, N.W.T., Canada, to take part in researches connected with the second international polar year to be conducted by field parties of 13 nations under the auspices of the International Meteorological Commission.

Mr. Stagg's expedition will be one of two which Great Britain will contribute to the personnel of the commission's enterprise, which falls on the jubilee of the first international polar year, 1882-83.

The party plans to leave England about May 15 and will travel via Montreal, Edmonton, the Athabasca and Slave rivers to Great Bear Lake on the north arm of which Fort Rae is situated. The other expedition will go to Tromsoe, Norway.

Both British parties will be located on the perimeter of the maximum frequency of the Aurora Borealis (northern lights) which they will study by means of synchronized cameras, hoping to accumulate data which will be of use to radio research workers.

The expedition at Fort Rae will investigate a theory that the Aurora is caused by rays from the sun stopped by the so-called "Heaviside Layer" which reflects radio waves and which is thought to extend over the earth at a height of about 60 miles.

The party will set up two camps with equipment about 25 miles apart and linked by telephone. From these two points it will take simultaneous photographs of the Aurora. The expedition will carry 25 miles of telephone wire which will be stretched along the ground in a single strand, and will effect completion of the circuit through the water of the lake in order to avoid carrying an extra length of wire.

The expedition will also study air currents and temperature of the atmosphere at different altitudes. It will send up small balloons carrying instruments for recording altitude and temperature and small wireless sets newly developed in Europe which will automatically signal a continuous record to stations on the ground below.

Real Rulers In China

Irresponsible Student Class Really Run Country, Says Montreal Man

W. M. Birks, president of Henry Birks and Sons, Limited, Montreal, who was in China recently, writes in the Commerce of the Nation that many of the Chinese are kindly, courteous, humorous, good merchants and bankers, and much like ourselves. He regrets that "all the Chinese in Canada are coolies from Canton," and wishes that we could meet some of the choice souls, so like us in many ways, especially if we look beneath the surface. Mr. Birks continues:

"One notices, too, the extraordinary swing of China from the condition in which the older generation ruled everything to the tragic ruling by the youth of today. Too many of the student class, educated in Western American universities, come back with half-baked ideas of freedom, and the student class is to a large extent ruling the country. When I was in Shanghai, five trainloads of students went to Nanking and demanded that Chiang-Kai-Shek, the President, make an immediate declaration of war against Japan. He said: 'Gentlemen, this patriotism is glorious, I am proud to see your patriotism. Of course, with this spirit, you will go right behind this building and we will enlist you—here and now and start drilling.' They all evaporated and went home!"

Mr. Birks' opinion of the "half-baked" student class is confirmed in the April Atlantic Monthly by Nora Wain, an American woman who has lived many years in China. Writing from Tientsin, Mrs. Wain states: "There is no abatement in the activities of the Anti-Japanese Society. This morning I was in the shop of Ping on the Taku Road when a pretty little Chinese girl about four years old, dressed in pink silk trousers and coat lined with white rabbit, came in holding her nurse's hand. The child told Ping that her uncle had given her a dollar and she wanted to purchase a doll.

"Ping's clerk was wrapping up the doll when two Anti-Japanese scouts arrived. They were exceedingly self-assured school boys of perhaps 15 or 16 years. The eldest took the parcel from the clerk, examined the doll, and said it was made in Japan. Then, despite the protests of the child and her nurse, he tucked it under his arm and joined his companion in pulling merchandise from cases and shelves. They pronounced this and that Japanese-made, and threw the goods carelessly on the floor, trampling over them so that Ping's tidy shop was soon in a disgraceful state."

Mrs. Wain adds that there was a policeman on duty who could easily see what was going on in the shop but he did not interfere.

Rules For Seeding and Thinning Mangels

Result Of Tests At Central Experimental Farm, Ottawa

In a time of economic depression like the present, when prices of agricultural products are so low as to leave little of no margin over the cost of production, every effort should be made to reduce costs and increase yields as much as possible.

In the production of mangels, a crop requiring a large amount of manual labor, the field husbandry division of the Central Experimental Farm at Ottawa has been conducting experiments for the last eight years to determine the influence on yield of various rates of seeding and distances of thinning.

Mangels were seeded at the following rates: 6, 9, 12 and 18 pounds per acre. The average yields over the eight year period were 21.42, 22.38, 22.05, and 23.20 tons per acre for the respective rates of seeding. According to these results, the rate of seeding of 9 pounds per acre has given the most economical results, valuing mangels for feed at $1.65 per ton.

Comparisons were made among four distances of thinning mangels; 6, 9, 12 and 18 inches apart. The 9-inch thinning gave an average yield of 25.63 tons per acre over the eight year period, which was an increase of 2.25 tons over the 6-inch thinning, the next highest yield. As hoeing and thinning repesent nearly one-half the manual labor involved in growing a crop of mangels, it would seem very desirable to obtain the highest yield from this labor by thinning the plants to the proper distance.

A Job For the Chemists

Architects in Germany are asking chemists to produce a plastic putty which can be used to make houses without joints. They claim every joint in the floor or walls is an accumulator of dirt that may harbor germs. Moreover, every joint in a wall wainscoting or wallboard tends to lessen strength and durability of the structure.

"Do you believe kissing is unhealthy?"

Nell: "I've never——"

Bill: "Never been kissed?"

Nell: "No, never been sick."

Predicts Demand For Heavy Draft Horses

Farmers May Find Them Cheaper Than Tractor Or Combine

The present low price of oats and other feeds, in contrast with the higher costs of gas and oil required in tractor operation, combine, as the Dominion animal husbandman suggests, to indicate that the horse is gradually regaining favor as a medium of farm power. He predicts that the next few years will see a revival in horse breeding and the use of heavy draft horses on the farms in Canada, both east and west. As he points out, under present conditions horses can be bred and reared cheaply and when they have reached working age, the charges for depreciation, fuel and repairs are surprisingly low, for the self-oiling engine has nothing whatever on the self-repairing heavy draft horses.

The Wisdom Of Spiders

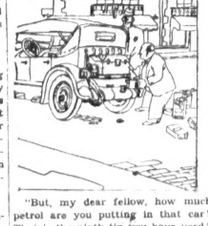

Weave Skeins Close To Ground In Hurricane Season

Here is another puzzle for those who like to ponder on such things. In British Honduras the human race knew not of the hurricane that was to sweep the island. And yet in Bermuda the famous silk spiders were weaving their skeins on low bushes, as close to the ground as possible, instead of in the high trees, as usual. Natives of the island know that when the spiders do this through the summer, there will be a season of hurricanes. How do the spiders know?

A Nashville paper defines a citizen thus: "A citizen is a man who demands better roads, bigger schools, a new postoffice and lower taxes." Canada is familiar with the type.

Coloring apples by artificial sunlight was recently achieved when ripe but uncolored apples took on full coloring after 48 hours under ultra-violet light.

Artificial limbs made from light aluminum alloys are said to have advantages over other materials.

"But, my dear fellow, how much petrol are you putting in that car? That is the ninth tin you have used."

"Yes. I have heard that my wife intends to elope in this car."—Buen Humor, Madrid.

SOME PRECIPITATION RECORDS
Experimental Station,
Lacombe, Alberta

Daily weather records for twenty-five years show that it is very seldom that there is much rain fall during April. In only 3 years out of the last 25 years has the precipitation for April been over 2.5 inches. With one exception the rain during the six days, April 20 to 25, 1932 was the heaviest April rain on record. 3.92 inches fell during the six days, but on April 14 and 15, 1918, rain to a total of 4.6 inches fell in a little under 48 hours. This was the heaviest two days rain recorded at any time during the last 25 years.

The present heavy rain was very much needed as the sub soil was probably never drier than this spring. From July, 1927 to June, 1931 was one of the worst dry periods on record in Alberta, and the water in streams and sloughs has not been as low in 30 years. June 1931 with 8.1d inches precipitation was with the exception of June 1916 with 8.49 inches the wettest June on record and July and August were also wet months, but the extremely heavy crop which resulted from these wet months apparently used up all the reserve moisture and left the sub soil very dry. The 4.62 inches of rain which have fallen since April 18 came gently and has penetrated the soil to a depth of from two to three feet. This will stop soil drifting and provide a good reserve of moisture. What is now needed is dry weather to finishing seeding, and warm weather for growth.

LADIES GOLF CLUB

Reports of last year, given in at the annual meeting of the Ladies' Golf Club, on Monday evening, showed a very successful season. A resolution was passed expressing deep regret at the coming removal of Mr. and Mrs. A. G. Allen from Lacombe. For the last three year, Mr. Allen's assistance with the decorating for the Club's Assembly dances has proved invaluable, the colors and arrangements as worked out under his direction being both unique and attractive. Officers elected for the ensuing season are: President, Mrs. John Gilmour; Vice-President, Mrs. Geo. Doherty; Sec.-Treas., Miss Margaret Morrison; Tea and Social committee, Mrs. A. M. Campbell, Mrs D. F. Chisholm; House Committee, Mrs. G. Doherty, Mrs. W. N. Morrison; Tournament, Mrs. J. H. W. Moore, Mrs. H. Teare.

O. O. LUNDBERG TO LACOMBE

We have pleasure in announcing to our many friends in the Lacombe district the appointment of Mr. O. O. Lundberg as manager of the Lacombe Creamery.

Mr. Lundberg has been actively associated with the Dairy Industry in Alberta during the past ten years. On completion of his dairy training in Edmonton, he spent several years with the Provincial Government of Alberta in the capacity of Government Cream Grader. This work gave him first hand knowledge of cream, the many and varied flavours it may acquire, and how these may be avoided.

On leaving the Government service to engage in commercial creamery work, Mr. Lundberg associated himself with the Central Creameries, and became stationed at Eckville. At this point he has made a remarkable record in the manufacture of butter, both commercial and exhibition. He has been a consistent prize winner at the leading exhibitions; and last year was awarded third prize in the Alberta Provincial Yeast and Mould Contest, being only 1.1 points below first place. This contest is one in which the results indicate the sanitary conditions of not only the butter itself, but also the creamery in which it was made.

Mr. Lundberg has not only been actively engaged in the manufacture of butter; but he has also been very closely connected with the many other phases of creamery operation. His work has been of such a high calibre, that we felt justified in not only giving him a well earned promotion, but also in placing him in charge of one of our most important plants.

Central Creameries, Ltd.

BENTLEY NEWS

Mr. Hugh Gunn, who is leaving Bentley in the near future is opening a store at Gull Lake, where he will operate all summer. This store was operated last year by Mr. J. Mitchell. Mr. Gunn will carry a full stock of groceries and camper's supplies, and hopes to see all his old friends there.

The "Deacon Slips" which was to be presented on Friday last, by the Sylvan Lake Dramatic Club has been postponed on account of the weather until Friday night, April 29th.

Miss Madge Brown, matron of the Bentley Hospital went to Edmonton on Monday afternoon to visit her sister, who for the past week has been confined to the hospital, following an accident.

Mrs. C. W. Hergott is visiting her mother-in-law Mrs. Hergott, in Edmonton.

Maryl Oborne of Turner Valley, is visiting his parents in Bentley.

Miss Gwen Halpin, R.N. is relieving Miss Brown at the Hospital.

Miss Alice Blaikie spent the week-end in Edmonton, and returned to Bentley on Sunday night.

Mr. Harold Hopkins had his tonsils removed in the Bentley Hospital, on Saturday.

Bentley has had four inches of snow in the last week, and the farmers are somewhat delayed on getting on the land.

At the recent meeting of the transfer committee held in Toronto, Rev. W. J. Moores, of Bentley, was granted his transfer to Bondon Conference at the end of June next.

OBITUARY OF FRANCIS RILEY

Francis Riley passed away at the home of his daughter Mrs. Unwin at Fairview, April 20th. Last Spring Mr. Riley was mauled by a bull, the shock from which left him with a weakened heart, which together with an attack of influenza caused his death.

The deceased was born at Wilberforce, Renfrew County, Ontario, on April 1st, 1859 and was buried in the Lacombe cemetery Friday, April 22nd, exactly forty six years after he laid his father to rest.

Mr. N. N. Woody of Lacombe, had charge of the funeral arrangements. The funeral service was held at the Fairview United Church, the Rev. M. Lindsay Wright preaching from the words "Rise, let us be going", Matt. 26:46.

The late Mr. Riley leaves to mourn his loss, his wife, (nee Sarah McKibbon); three daughters, Clara, Margaret and Sarah—Mrs. Lord, Mrs. Unwin and Mrs. Schon; two sons, Robert and Ellis, and two brothers, Isaac and James of Belleville, Ont.

Mr. Riley was a member of the Methodist Church, Wilberforce and also a member of the I.O.L. The following floral offerings were on the casket: In Loving Remembrance, the Family; Sarah and Family, In Sympathy, Iowalta Needlecraft. Will and Family, In Sympathy, Iowalta Needlecraft.

THE CHURCH OF ENGLAND IN CANADA

Diocese of Calgary

St. Cyprian's Church, Lacombe

Rector: The Rev. T. H. Chapman

May 1st, 3rd Sunday after Easter

8:00 a.m. Holy Communion.
10:00 a.m. Sunday School.
11:00 a.m. Morning Prayer.
7:30 p.m. Evening Prayer.

Thursday, May 12th, 8 p.m. The Bishop will be here for the purpose of administering the sacramental rite of Confirmation or "Laying on of Hands."

Sunday, May 15th, 8 a.m. The Bishop will be here for the purpose of administering the Sacrament of Holy Communion, in commemoration of the 38th anniversary of the formal establishment of this Parish.

FAIRVIEW NEWS

We have had a wonderful rain which was very much needed.

A large crowd attended the funeral of Mr. Unwin at Fairview Church on Thursday last.

Miss Dorothy Ogilvie spent last week in Lacombe visiting friends.

Mr. and Mrs. Morrison have moved onto the farm formerly occupied by Albert Powers.

Don't forget the play at Fairview Church on Friday, April 29th. Come and sympathize with the poor, lone preacher and fourteen women. A good evening's entertainment is promised.

MRS. J. E. BONE
RED DEER, DIES

Red Deer, April 24—Mrs. J. E. Bone, resident here for the past 13 year, died in the Memorial Hospital, Wednesday morning following a lengthy illness. Mrs. Bone came west with her husband and family from Ontario in 1912, living at Vermilion until 1919, when they moved to Red Deer. She was 54 years of age.

Deceased is survived by her husband, her daughter, Mrs. N. T. Frost; and a son, Harold J., of Red Deer.

MUSICAL TREAT

Wednesday evening, May 11th, at 8:15 in St. Andrew's Church a string quartette, 1st and 2nd violins, viola and violin 'cello from Edmonton will assist the piano pupils of Mrs. F. H. Reed, A.T.C.M., in recital. Silver collection for music fund of the Church.

REPORT CONDEMNS SYSTEM

The condemnation of three Senators involved in the Beauharnois affair contained in the majority report of the Senate committee included an incidental condemnation of the system of obtaining party funds in Canada and an inferential exoneration of the Beauharnois Corporation.

The report stated that "Senators Wilfred Laurier McDougald and Andrew Hayden performed duties that were not fitting or consistent with their duties and standing as Senators of Canada; Senator Donat Raymond accepted very large sums of money by way of campaign fund contributions from a company which was vitally on government franchise or concessions."

The implication of this is that the political system stood in the way of Beauharnois development and that the sponsors of the Beauharnois scheme had to choose between endless delay on the one hand and "party bribery" on the other. The report, it is true, does not state specifically that the Beauharnois Corporation had a club held to its head, but it does stress, significantly, that this company was "dependent vitally on government franchises or concessions."

The dependence, moreover, would explain why both parties received money from persons connected with Beauharnois. Dependent upon government franchises, the company could not afford to take a chance on the election. For the sake of its very survival, it had to back both sides.

Without anticipating the report of the committee, The Albertan last week stressed the point that politics held up the Beauharnois project and that the first duty of the government which precipitated an inquiry into a situation which was produced by political factors was to guarantee continuance of that project. The report serves to bear out the further contention that the present Beauharnois Cowpany which was victimized by the political system, should be given an opportunity of finishing the project it started.

There is a further necessity. The Senate committee report implied that the company was dependent vitally on government franchises. We must have a guarantee that companies in this position are not forced to contribute to party funds in order to obtain the rights which do not belong to any party but to the people of Canada.

The immediate necessity is to ensure continuance of the Beauharnois scheme; the second necessity is to alter the campaign fund system. The first demands government protection of the company; the second enforced publication of all receipts and expenditures of every political party in Canada.

THE BURDEN OF GOVERNMENT DEBT

Some sobering statistics on Canada's borrowing and spending proclivities in the past decade are presented in the latest bulletin issued by the Citizens' Research Institute. It is pointed out that the total gross funded debenture debts of the national, provincial and municipal governments from 1921 to 1930 grew 16.2 per cent., while the total estimated wealth of the country from 1921 to 1928 increased by 30.4 per cent. Governmental expenditures have developed rapidly since 1930, owing to the business crisis, and the national wealth could hardly have maintained the same rapid rate of growth. The present total debt of the Dominion is estimated at about $6,100,000,000 and the per capita debt, $600.

The provincial debenture debt increased most rapidly in the period 1922 to 1930, namely 72.5 per cent.

The gross municipal debenture debts increased 33.9 per cent. during the same period, or much faster than taxable assessment, which advanced but 17 per cent. The mortgage on municipal debenture debts on this therefore increased from 13 per cent. in 1922 to 15.5 per cent. in 1930. Gross debenture debts for school purposes, included in the municipal, increased in the period 48.5 per cent. or considerably faster than that for strictly municipal purposes. Debenture debts less sinking funds for municipal purposes, were less in 1930 than in 1922 in Alberta and Saskatchewan and very little greater in Manitoba. This was due to a determined effort to catch up with over-expansion in previous years.

FISH AND FLESH

The federal budget represents a continuation of the policy of placing an increasing burden of taxation on business. This was hardly a matter for surprise. Levies on corporations can be collected with a minimum of effort and expense. Besides, it is good politics to tax big business rather than individuals. In the long run, of course, the effect is to add to the cost of production, curb turnover, reduce profits, strangle the business operations which aid the community and increase unemployment. But politicians could hardly be expected to look so far ahead. And they would probably not continue long in power (if they were in fact ever elected) if they took such a business-like view of national finance and the management of public affairs. It has been said that it is much more difficult to introduce business into the government than it is put the government into business.

The policy or habit of the government in looking to corporations for revenues is made quite clear in the attitude of the Department of Finance towards the public utility corporations as compared with competitive public ownership enterprises. As pointed out by J. S. Norris, vice-president and managing director of Montreal Light, Heat & Power, Consolidated, no attempt has been made in the budget to equalize the burden of taxation throughout the country instead of increasing the rate of the distributing corporation income tax by means of which customers of privately owned utilities are mulcted for the benefit of publicly owned utility customers.

The people of Quebec in general and the citizens of Montreal in particular, having as a matter of policy, favored corporation development of water power resources, have a special grievance against the government in this connection. Montreal Power Consolidated alone, in the year 1930, paid over $1,000,000 in the form of federal corporation income tax—and this, of course, was borne eventually by the company's customers. Under the budget, the situation will be further aggravated for the current year.

It had been indicated that because of the government's needs for revenue the situation would be justified by taxing the publicly owned utilities in Ontario and other parts of the country on the same basis as the private corporations. It can only be assumed that the government decided that this would not be good politics.

AT THE AVALON
"Viennese Nights"

It is the first original screen romance written by those acknowledged masters, Sigmund Romberg and Oscar Hamperstein II, and staged and produced with a lavish hand by Warner Brothers. Nothing just like Viennese Nights has ever been attempted on the screen. It contains an original symphony played by the Los Angeles Symphony Orchestra of one hundred pieces, and the story is one of the most hauntingly beautiful ever transferred to the talking screen. Walter Pidgeon, Jean Hersholt, Vivienne Segal, Alexander Gray, Alice Day, Louise Fazenda, Bert Roach and Jane Purcell head the cast of gifted players. The entire picture is photographed in technicolor against authentic period backgrounds that for size and detail have never been equalled on the Warner Brothers lot.

COMING

Janet Gaynor and Charles Farrell in "Merely Mary Ann", May 5, 6 and 7.

"Riders of the Purple Sage," May 12, 13, and 14.

Save Money on on Your Dry Cleaning

The Freshness of the Summer Sky about describes the Delightful condition of your Clothes after we have cleaned them and you will be possessed of the comfortable knowledge that you have saved money.

Let's Go—Who'll Be First

Tickets will be drawn, Saturday 10 p.m., June 4th.

Rainbow Cleaners

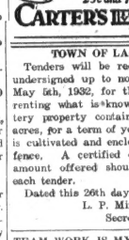

BARTER

Al Capone has repeated his offer to find Colonel Linbergh's baby if he is released from jail. This time his offer contained an absolute guarantee that, if he were released, the baby would be returned without payment of any more ransom.

The theory has been presented before that the Lindbergh kidnapping was the result of organized hoodlums who were interested in something more than money, although it well may be that Capone's offer is more bravado and self-advertisement.

Nevertheless, should Capone be released and should the baby be restored unharmed to the parents as a result, what an amazing triumph it would be for the organized forces of disorder in the United States. It would deal a tremendous blow at the prestige of the United States government.

Indeed, the consideration does not merely concern whether it would be justified to agree to liberation of the gang chief in return for the baby's return. In concerns also the wisdom of permitting Mr. Capone to give such a graphic illustration of his power.

HOW MANY SUPERTWIST CORDS IN THE AVERAGE GOODYEAR TIRE?

$3000.00 IN CASH PRIZES

1st prize — $1,000.00 cash
2nd prize — $500.00 cash
3rd prize — $200.00 cash
4th prize — $100.00 cash
5 prizes, each $50.00 cash
95 prizes, each $10.00 cash
104 prizes totalling $3,000.00

$1,000.00 in cash—extra! It would look pretty good to you right now, wouldn't it? Well then, invest a few minutes of your time to get it. Entering this contest will not cost you a cent of your money—but you'll get some fun out of it, particularly if you like a little problem in arithmetic.

Here are the simple facts of the contest: Anyone from a household where a car is owned may enter.

There is no entry fee, nothing to buy, no special requirement. All tire dealers, all rubber company employees and the families of both are, however, debarred.

See the six Goodyear Tires of various sizes, types and ply-thicknesses on display here. Then estimate the number of cords in each, find the total, and divide by six to obtain the average. A section of Goodyear Supertwist Cord fabric is on display to help you make your estimate.

Get a standard entry form from us on which to make your entry.

Closing date: June 5th, 1932. Address: "The Goodyear Supertwist Cord Contest," New Toronto, Toronto 14, Ontario.

Rev. W. J. Moores, of Bentley is exchanging pulpits with Rev. Mr. Layton for the evening service at St. Andrew's United Church, next Sunday, May 1st. Immediately following the service a congregational meeting will be held to discuss local church financing. As a quorum of forty members is necessary to transact business it is hoped every one will make an effort to be present at the meeting.

The preliminary hearing of Maloney's libel charge against The Western Globe was before Magistrate Scott, on Monday, and was remanded. The Western Globe put in no defence. Messrs. J. S. McCormick, Lacombe, and J. W. O'Brien, looked after the interests of The Western Globe, and Morris Baker, of Edmonton, appeared for Maloney.

Mrs. A. C. Cannon arrived in Lacombe from Almonte, Ont., this week and will spend a few months visiting Mr. and Mrs. Gib. Cannon.

Rev. James Desson, died in Calgary on Tuesday following an operation. Mr. Desson will be remembered by many in Lacombe, he having been in charge of the Baptist Church here for several years. We join with his many friends in Lacombe in extending our sincere sympathy to the bereaved family.

PROTECTION FOR MIGRATORY BIRDS

Canada and the United States are giving serious attention to the migratory bird situation, particularly as it affects water fowl, notably wild ducks and wild geese. Last week a three-days' conference was held at Ottawa, with representatives from every province meeting federal officials in an effort to prepare a programme which may be carried out in co-operation with Washington. Hon. George Hoadley, minister of agriculture, presented the case for Alberta and placed emphasis on the fact that Canada was the great breeding ground for the waterfowl, killed comparatively few birds, whereas the United States hunters shot millions more than fell to guns in the Dominion. His point was that the States should assure as rigid conservation as was proposed by Canada, for it was not equitable that Canada should raise the birds, merely to have them shot in the United States.

Recommendations of the Ottawa conference include bag limits for day and season, with not more than 15 duck a day, regulations controlling sunken punts or blinds, baiting and automatic and repeating shot guns.

Duck restoration plans occupied the attention of the corresponding three-day conference in Washington earlier in the month and common agreement was expressed that unless conservation measures were organized, the waterfowl hunters of the States would ultimately be deprived of their favorite sport. Therefore a shorter season and smaller bag limits were proposed, and approved, subject to ratification. The cent a shell plan was not favored but federal license tax of a dollar was endorsed, the funds thus raised to be used to improve conditions. Inviolate waterfowl refuges were also endorsed.

Yes
ELECTRIC COOKERY
can be FAST!

SPEED is what women want in electric cookery—and speed is an outstanding feature of every General Electric Hotpoint Range. CALROD Hi-Speed heating element—the million-dollar discovery of General Electric research—is as swift as electricity and clean as electric light.

With Hotpoint electric cookery, meats and vegetables are much more nutritious and appetizing. Natural flavors and nourishing food elements are *sealed in*—not boiled away. Your kitchen keeps cool and healthfully free of fumes.

"Designed by women for women", the General Electric Hotpoint Range has every feature you want—including the wonderful Super-Automatic Oven Control. You can have a cabinet model Hotpoint completely installed in your home for only $10 down. See your dealer today.

H-32C

This remarkable element makes Hotpoint electric cookery as fast and economical as it is clean and convenient. It is an exclusive feature of General Electric Hotpoint Ranges.

CHILD need REGULATING?

CASTORIA WILL DO IT!

When your child needs regulating, remember this: the organs of babies and children are delicate. Little bowels must be gently urged—never forced. That's why Castoria is used by so many doctors and mothers. It is specially made for children's ailments, contains no harsh, harmful drugs, no narcotics. You can safely give it to young infants for colic pains. Yet it is an equally effective regulator for older children. The next time your child has a little cold or fever, or a digestive upset, give him the help of Castoria, the children's own remedy. Genuine Castoria always has the name:

Chas. H. Fletcher
CASTORIA
CHILDREN CRY FOR IT

WORLD HAPPENINGS BRIEFLY TOLD

Commercial telephone service has been established between France and Buenos Aires.

The Prince of Wales attended a dinner given by the Pilgrim Society to Andrew W. Mellon, new United States ambassador to Great Britain.

Italy has signed a treaty with Russia which binds the Soviet to buy $12,000,000 of Italian products during the year.

A new "lingering" anesthetic which continues to kill pain after an operation, but has no habit-forming power was reported to the American Chemical Society.

The will of John Philip Sousa, famous bandmaster, was filed, leaving his entire estate to his wife and three children. The estate was valued in the will at "more than $20,000."

Mahatma Gandhi's adopted daughter, Bai Laxmi, 18, an "untouchable," was sentenced to two months imprisonment at hard labor for activities in the civil disobedience campaign.

Howard Nicholson, professional attached to the Granite Club of Toronto, won the open professional figure skating championship of Great Britain at Oxford.

Taking of a plebiscite on abolition of beer parlors will be recommended by the Alberta government next year, providing general conditions improve, Premier Brownlee says.

Great Britain's unemployed on March 21 totalled 2,567,332, which was 113,841 less than the month before and 12,786 less than at the same time last year. The improvement was noticeable in nearly all industries.

Preserve Virgin Timberland

Frank J. Barnjum Acquires Large Tract On Vancouver Island

Another large tract of virgin timberland on Vancouver Island will be preserved for posterity through the generosity of Frank J. Barnjum, Montreal philanthropist and tree conservationist. Two thousand acres of timbered land on the Cowichan River has been acquired by Mr. Barnjum from its owners. The property is a beautiful park area replete with rivers, streams and lakes, with wild life in the woods and fish in the streams. The purchase makes Mr. Barnjum the largest holder of big timber on that river.

Sowing Wheat From Air

Feasibility Of Using 'Planes Demonstrated By Soviets

Aeroplanes soaring less than 100 feet above the ground at a speed of from 60 to 70 miles an hour recently demonstrated the feasibility of sowing wheat from the air on a Soviet state farm in central Asia.

The 'plane sowed an area of about eight acres on each flight, covering a total of 300 acres a day. In just a fortnight four 'planes sowed 8,000 acres. Each 'plane is equipped with a sowing "spray" 65 feet wide.

CARTER'S LITTLE LIVER PILLS

Canada's Merchant Marine

Recorded Better Financial Operating Results For 1931 Than Previous Year

Canada's merchant marine recorded better financial operating results for 1931. The deficit of $834,210.59 in 1930 was cut down to $444,285.53 in the past year. The financial improvement of $389,925.36 is shown in the 1931 report of the Canadian government merchant marine tabled in the House of Commons by Dr. R. J. Manion, Minister of Railways and Canals.

Both operating expenses and revenues decreased. "The reduction in operating expenses reflects the smaller number of voyages as well as the effort to reduce expenses to a minimum consistent with safety," the report states. There were no major accidents in connection with the operation of the fleet during the past year.

Out For Speed Record

Frenchman Hopes To Try Racing Car At Daytona Beach

M. Stepp, French inventor of a racing motor car which he claims will travel from 325 to 385 miles per hour, said he hoped to take his machine to Daytona Beach, Fla., to attempt to beat the 253.97 miles per hour record recently set by Sir Malcolm Campbell, British driver. The inventor said the car's initial try-out at Chatou was successful.

Powered by three aero engines of 800-horse-power each, and placed to form a motor turbine, the racer in bench tests developed 22,000 revolutions per minute for 57 hours. The car has a smaller engine to start it and set the three large motors going.

Permits Passage Of Light

Transparent Aluminum, a German Invention, Still Has Yellowish Tinge

Transparent aluminum has been produced by a German chemist by substitution of substances in preparing an alloy which retains all the properties of the original metal, yet permits the passage of light. So far, the emerging light has a yellowish tinge but the chemist is working to eliminate this color and make a glass-clear product.

PARIS IS HAVING HER SAY ABOUT THE JACKET DRESS THIS SEASON

Whether you want a sheer woollen dress or a crepe silk dress for spring wear—here is a charming model.

It is jacketed in a most approved and voguish way. And it's exceptionally slimming with its bias lines.

The sleeveless dress offers such marvellous schemes for contrast.

Since blue is so modish, imagine the effectiveness of this model in a blue crepe silk delicately patterned in yellow. For the upper bodice, plain yellow crepe is used.

Could anything be more charming and practical?

Style No. 334 is designed for sizes 16, 18, 20 years, 36, 38, 40 and 42 inches bust. Size 36 requires 3⅞ yards 39-inch with ¾ yard 39-inch contrasting.

Price of pattern 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Drought and Grasshoppers

Scientific Research Has Proved They Are Co-Workers

Two of the farmers' most vicious enemies—drought and grasshoppers—are co-workers, it is revealed on the basis of scientific research.

If a farming region suffers from drought in one season, according to the investigations, the farmers of that area may expect a plague of grasshoppers the next year. The reason, it was explained, is that aridity is favorable for reproduction of the insects.

A report of the investigation was made by R. O. Cromwell, formerly of the United States Department of Agriculture.

"Unusually dry weather, especially for successful seasons," Cromwell said, "is favorable for reproduction of 'hoppers, and unfavorable for insects which destroy the grasshoppers and their eggs."

Makes Canoe Safer

New Type Of Non-Capsizing and Unsinkable Craft Is Constructed

A new type of non-capsizing and unsinkable canoe, weighing between 80 and 90 pounds and for which a patent has been secured, has just been built by M. Pepin, of Quebec City. He claims that even with a full load there is not the slightest danger of the craft sinking nor can it turn over. With an outboard motor, Pepin says, the canoe will be capable of making 35 miles an hour.

Cork, Irish Free State, is building many houses for war veterans.

Manufacturing In Canada

Western Provinces Now Becoming Important In Manufacturing Industry

The position of Canada as a manufacturing country is indicated by a report just issued on the manufacturing industries of Canada for the year 1930. This report states there were at the end of that year a total of 24,020 manufacturing p'ants in the Dominion, which represented a capital investment of $5,203,316,760, gave employment to 644,439 persons and produced goods valued at $3,428,970,628. Manufacturing in Canada is concentrated largely in the provinces of Ontario and Quebec, although the western provinces are becoming important in manufacturing.

From statistics of the forty leading industries of the Dominion the pulp and paper industry leads with a gross output of products valued at $215,674,246. The other nine are in the order of their importance as follows: slaughtering and meat-packing, flour and grist mills, central electric stations, saw-mills, butter and cheese, railway rolling stock, electric apparatus and supplies, automobiles, and non-ferrous metal smelting and refining.

Of the total gross value of manufactured products in 1930, the Province of Ontario accounted for $1,713,025,322; Quebec, $1,022,280,687; British Columbia and Yukon, $241,121,932; Manitoba, $142,424,990; Alberta, $94,314,782; Nova Scotia, $85,802,921; New Brunswick, $63,468,262; Saskatchewan, $62,276,766; Prince Edward Island, $4,254,966.

There has been a remarkable growth in Canadian manufacturing in comparatively recent years. In 1910 the gross value of Canadian manufactured products was $1,166,000,000 or about $2,062,000,000 less than the value in 1930. Manufacturers in other countries have realized the advantageous field which Canada offers for the establishment of branch factories and have invested large amounts of capital in varied enterprises. Canada is second in importance as a manufacturing country in the British Empire. Goods, formerly imported, are now manufactured in the Dominion in sufficient volume not only to meet the requirements of the home market, but also for export. Canada now sends manufactured goods to almost every country in the world.

Upset Stomach

"I used BABY'S OWN TABLETS for my children when they had vomiting spells, and found that they settled the stomach," writes Mrs. J. M. Guthrie, Smith's Falls, Ont. Valuable for teething troubles, colds, fevers, colic. Easy to take — and harmless. See certificate in each 25c package. 239

Dr. Williams'
BABY'S OWN TABLETS

Recipes For This Week

(By Betty Barclay)

JELLIED RHUBARB PIE

1 package quick-setting gelatin dessert (lemon flavor).
1 cup boiling water.
¼ cup orange juice.
2 lbs. young strawberry rhubarb
1½ cups granulated sugar.

Cut rhubarb in one-inch pieces. Steam in double boiler until tender, but unbroken. Add sugar when nearly done. Dissolve quick-setting gelatin dessert in boiling water. Measure any juice from rhubarb and add water, if necessary, to make ¾ cup. Add to gelatin. Add orange juice. Chill until it begins to thicken and then fold in carefully, the pieces of rhubarb. Pour into small baked pastry shells and chill until firm. Garnish tops with meringue of a rosette of softened cream cheese.

OATMEAL MACAROONS

2½ cups of rolled oats (oatmeal).
1 cup of sugar.
1 teaspoon of vanilla.
2 eggs.
1 tablespoon of melted butter.
2 teaspoons (rounded) baking powder.
1 level teaspoon of salt.
cup seedless raisins.

Cream sugar and melted butter — add beaten yolks, then work in gradually oatmeal, to which has been added salt and baking powder. Then add vanilla and nutmeg and beaten whites of eggs and raisins. Drop in small quantities on floured baking pan and bake in rather slow oven.

Reduce Freight Costs

Plan Construction Of Road In Great Bear Lake District

Construction of a road around the seven miles of rapids in the Bear River is under consideration by the Dominion public works department as a step to reduce freight costs and simplify transportation into the miner district of Great Bear Lake.

C. C. Ross, of the Dominion Mining and Metallurgy Department, revealed this move in an address at Calgary. Transportation, he said, was the great problem facing development of the radium-bearing pitchblende discoveries around Great Bear Lake.

State Crown Repaired

Jewels Were Polished and Some New Gold Added

The crown that the king wears on state occasions came back from the cleaner's an inch higher than when it was sent away. Since it was made for Queen Victoria in 1839 it had sunk and become so insecure that it might not have retained its shape if worn much longer. In the reblocking process each of its 3,000 jewels was taken out and polished and some new gold was added so that it would not sink again.

Fish meal was formerly used chiefly in fertilizer stock, then it became valuable as animal feed, and now it is considered for human food under the name "fish flour."

A kettle drum is the only instrument of its kind that can be tuned to the key of the selection being played.

BURGLAR: "Tain't no use looking any further, mate. We might as well clear out. Here's a receipt the blighter's just 'ad from the Income Tax people."—The Passing Show, London, England.

Urged Armistice In 1915

Kaiser's Son Saw Defeat After Marne German Asserts In Interview

The Democratic "Vossische Zeitung" publishes an interview by a correspondent of the Oslo newspaper, "Tideas Tegn," with the ex-Crown Prince of Germany which throws an interesting light on behind-the-scenes operations of the German General Staff during the tense days of 1915 following the defeat at the Marne.

"I proposed immediate peace after the Marne," the interview quotes the Crown Prince as saying, "I saw in advance that we must lose on all sides. But, unfortunately, I could not convince any one.

"Of course, we could not fight against the entire world. But the General Staff did not have a practical contact with the front. For example, 6,000 men were expected to hold a front line for which 20,000 were necessary. That was impossible. Besides that, there was a shortage of munitions.

"Everything was lacking. For example, we needed a railroad to the front. It was built, then shot to pieces by the French. It was rebuilt. But when it was ready it transpired that we had no locomotives. So we had to fall back on trucks. Roads were built. But when they were finished we had no benzine for the trucks. So the munitions had to be forwarded by horse.

"Finally," the interview continues, "there came the grief-stricken mood from home. The soldiers were softened and wearied by the complaints of their wives and families. Added to that was the Communist boring from without and within. No. After the poorly conducted battle of the Marne, where the army and staff were not properly attuned we should have sounded a retreat."

Good Market For Apples

British People Eat Four Thousand Million Every Year

"An apple a day keeps the doctor away," is an old English adage about as true as most traditional sayings. If everybody in Great Britain ate an apple a day Canada would have to enlarge its orchards. They couldn't grow that quantity over there. Britain is a large importer of fruit. She buys empire produce from Canada, New Zealand, Tasmania and Australia, but also gets some apples from the United States. Possibly the Imperial Conference at Ottawa will peel those off. While it may look as if the British did not consume so many apples as they might, four thousand million apples are eaten in Great Britain in a year. Less than a fifth are grown in that country. Last year 127,340 tons of apples were imported into the Port of London alone. Britain cannot feed itself with apples and is still the best market in the world.

Air Stewardess Kept Busy

Flying Hostess For U.S. Line Has Travelled 250,000 Miles

Miss Katherine Maye, flying hostess for the United Air Lines, has completed her 250,000th mile of air travel on that system's coast-to-coast tri-motored 'planes. Miss Maye who went to Chicago two years ago is now dean of twenty-one stewardesses employed by that organization.

Among her duties are the serving of meals aloft, identifying points of interest along the routes and acquainting the passengers with the details of transcontinental flying. Because regular berths are not yet in general use in airplanes, the stewardess at night must manipulate the reclining chairs and provide pillows, blankets and individual reading lights and window shades. One of her most delicate tasks is to induce passengers who want to sit up and read to extinguish their lights so that the rest of the passengers can sleep.

Success After Five Years

Young Professor At Pittsburgh Has Isolated "Vitamine C"

A young professor of chemistry at the University of Pittsburgh announced casually:

"We have isolated and identified vitamine C."

For five years, Dr. C. C. King, not quite 35, and his associates, have labored for a solution long sought by research scientists.

He explained he had concentrated the vitamine from lemon juice.

Vitamine "C" is plentiful in lemons, oranges, tomatoes, potatoes and certain other vegetables and fruits.

Its effect upon the human body also have been known for quite some time, Dr. King said, but how it accomplishes its tasks has remained a mystery.

Also it was known that lack of vitamine "C" in the diet of humans resulted in scurvy and forms of malnutrition.

Livestock On Farms

There are 3,128,996 horses, 3,513,000 milch cows, 4,478,000 other cattle, 3,608,000 sheep and 4,716,720 swine on farms in Canada. The value of all live stock, including poultry is placed at $468,300,000.

London's engineering industry has 50,000 women employees.

France has 100,000 more railway employees than in 1913.

Pacific's Most Decorated Sailor

Capt. Robinson Of C.P.R. "Empress Of Japan," Retires From Service

The Pacific's most decorated sailor said goodbye to the sea at Vancouver on April 2nd. He is Captain Samuel Robinson, R.N.R., R.D., C.B.E., master of the Canadian Pacific liner "Empress of Japan," whose command ended with the ship's arrival from China and Japan.

Superannuated at the age of 62 he comes ashore to live in Vancouver after 48 years at sea, 37 of them in the Pacific service of the Canadian Pacific.

Command of the "Japan," queen of the Pacific fleet, passes to Captain L. D. Douglas, R.N.R., formerly master of the "Empress of Asia."

Virtually an institution in Vancouver and Oriental ports, Captain Robinson's career is almost legendary in some respects.

He first went to sea from Hull, England, as a boy of 14 in the full-rigged sailing ship "Imbres." His first command was the "Athenian" of the Canadian Pacific Service, in 1904. He began his career with the company, peculiarly enough, with the old "Empress of Japan," the queen of the Pacific to whose title his last command of the same name ultimately succeeded. He was then a fifth officer.

Typical of Captain Robinson's character was an exploit on the "Athenian," years ago. Kelp had lodged in one of the condensers' intakes and delayed the ship at Victoria. The diver did not seem to be making progress and loss of a mail bonus threatened. Captain Robinson doffed his uniform for a bathing suit, plunged overside, and reappeared with a handful of kelp. Minutes later the liner was on her voyage.

Commander of the liner "Empress of Russia" at Hong Kong, when the Great War broke out, Captain Robinson was appointed commander of the "Empress of Asia" the following year and patrolled the Red Sea under admiralty orders. In 1917 he was engaged in carying United States troops by the "Asia" from New York to Southampton.

At Yokohama in the earthquake of 1923, Captain Robinson stood on the bridge and saw the city rise and fall like waves at sea. Four thousand refugees, dragged from the harbor or from the shore by his officers, were taken on board the "Empress of Australia," which he then commanded. He received many decorations for his work at that time.

Captain Robinson's family affiliations are of the sea. His father was a master mariner before him, Captain Henry Robinson of Hull. His wife, the former Miss Jessie Nichols, whom he met and married in Maine, is a daughter of New England ship owners and mariners.

Captain William A. Robinson, of the United States navy is a brother.

Uses For Sitka Spruce

Due To Lightness Is Much Favored In Construction Of Aeroplanes

According to the forest service of the Department of the Interior, the wood of the Sitka spruce, a native tree of Canada, is soft, easy to work, and holds nails exceptionally well. It can be finished smoothly until it takes on a satiny lustre. It takes enamels, paints and varnishes very well and it is in much demand for veneer, plywood stock, woodenware, novelties and toys, since it possesses superior gluing qualities. Due to its combined strength and lightness Sitka spruce is much favored in the construction of aeroplanes, parts of small boats, spars, paddles, ladders, trunks, playground apparatus, etc., and its whiteness and uniform texture, together with the fact that it withstands warping, makes it a suitable wood for table tops, drain boards, and other uses where it is washed.

Declares Feat Not Difficult

Pilot Tells Of Taking 'Plane Into Crater Of Volcano

Pilot Frank Dorbandt, who recently set an airplane down on the snow inside an Iackchak volcano on the Alaska Peninsula, the first such airplane landing in an active crater ever made, said the feat wasn't difficult.

With two passengers, George Emery, of Seattle, and George Johnson, of Anchorage, Dorbandt circled the volcano several times after going in over the highest point of the rim, about 6,000 feet.

He set his ski-equipped 'plane down on the snow in the crater and ran it more than 500 feet. As the skis began to sink under the load of gasoline and three occupants he added he opened the throttle and climbed out of the crater.

The temperature was 40 degrees above zero. In colder weather or with a light load, a stop to permit an inspection would have been possible, he said.

For measuring the fatigue of workers a machine has been perfected that records their involuntary movements on a gauge as they stand on a small platform.

Pomous Employer—"We have 3,000 workers here."

New Office Boy—"Including me or before I came?"

The salt desert in Oklahoma, 40,000 acres in extent, is to be turned into a salt lake to serve as a refuge for migratory wild birds.

WHEN GASTRIC JUICES FAIL TO FLOW

You know how badly an engine runs when it gets clogged up. It's the same with your body when your gastric—or digestive—juices fail to flow. Your food, instead of being assimilated by your system, simply collects and stagnates inside you, producing harmful acid poisons. What you need then is a tonic—Nature's own tonic—Nature's six mineral salts.

You get all these six salts in Kruschen Salts, and each one of them has an action of its own. Together, they stimulate and tune up the bodily functions from a number of different angles. The first effect of these salts is to promote the flow of the saliva and so awaken the appetite. The next action occurs in the stomach, where the digestive juices are encouraged to pour out and act upon the food. Again in the intestinal tract certain of these salts promote a further flow of these vital juices which deal with partly digested food and prepare it finally for absorption into the system.

So you see there is no mystery about Kruschen. It works on purely scientific and well-known principles. Prove it for yourself.

Trans-American Airlines

Developing Air Route Across the North Atlantic

Pan-American Airways announced it had entered into an agreement with Trans-American Airlines to conduct the necessary survey and research work for development of an air route across the north Atlantic.

Details of the transactions were not made public and it was not definitely known whether survey flights would be made next summer over the proposed course, which is by way of Canada, Greenland, Iceland and the Faroe and Shetland Islands.

It was announced, however, that the thorough study of the project being undertaken will be a preliminary step to the actual launching of exploratory flights through the north.

Trans-American Airlines has been assisted during the past year in its study of the problem by the noted polar explorer, Vilhjalmur Stefanson, who proposed a northern commercial air route 13 years ago.

As an indication of the progress made in the preliminary work, it was pointed out the parliament of Iceland within the last month has passed an act granting Trans-American and their associated interests a 75-year franchise for the transportation of mail over Iceland on an air route between North America and Europe.

The specific routing of the northern line has not been determined pending the further extension of surveys.

Even Fish Get Lonely

Experiments Have Proved They Respond Quickly To Company

If you place a mirror in a tank which contains just one fish you have probably come to the conclusion that the creature is exceedingly vain, for it spends a great deal of its time admiring its own reflection. But Mr. Goldfish is not admiring himself. What he really wants to do is to go for a swim with the fellow he sees in the looking-glass. He is feeling lonely.

James Spooner has been trying looking-glass experiments with fish of various kinds, and he finds that they are first attracted by a mirror and then show signs of considerable annoyance. They begin by making overtures to the reflection, swimming to and from across the glass side by side with the image. Then they try to go through the glass in order to get closer to the other fish. Finding that the other fellow won't respond, they show signs of anger, swimming rapidly up and down and making little snaps of annoyance.

Australia Is Very Old

Geological Formations Estimated To Be 20,000,000 Years Old

A discovery made by gold prospectors recently affords further proof of Australia's great age. After boring through 200 feet of basalt they struck an old river-bed, and brought up water-polished stones which, according to the experts, had not been exposed to sunlight for over a million years. And there are geological formations in the Island Continent which are estimated to be at least 20,000,000 years old. Australia, too, has preserved living links with its remote past. Some of its animals and plants are definitely prehistoric species, such as have survived nowhere else. The duck-billed platypus, for instance, is the oldest existing type of mammal.

An inscription found at Delphi shows that in the first century B.C. Rome planned an international police system for the seas, to fight pirates and brigands.

Canada is larger than the continental United States by about 500,000 square miles.

THE HOUSE OF DREAMS-COME-TRUE
— BY —
MARGARET PEDLER
Author Of
"The Splendid Folly" "The Hermit Of Far End."
Hodder & Stoughton, Ltd., London.

CHAPTER XVII.—Continued.

"Yes," she acknowledged. "I am afraid I have been blind, Geoffrey. Indeed—indeed I would have prevented all this if I had known, if I had guessed. But, honestly, I just thought of you—you and Judith—as friends."

"I believe you really did," he said slowly, almost incredulously. Then, as though in swift corollary: "Jean, is there anyone else?"

The question drove at her with its sudden grasp of the truth. Her face grew slowly drawn and pinched-looking beneath his merciless gaze and her lips moved speechlessly.

"So it is that, is it? And does he—has he——"

"Geoffrey, you are insufferable!" The words came wrung from her in quick, low protest. "You have no right—no right——"

"No, I suppose I haven't," he admitted, touched by the stricken look in her eyes. "I'd no business to ask that. For the moment, it's enough that you don't love me. . . . But I shall never give you up, Jean. You're mine—my woman!" The light of possession flared up once more in his eyes. "Do you remember I told you once that, if a man makes up his mind, he can get his own way over most things? Well, it's true."

DEFINITE HELP FOR DWELLERS IN APARTMENTS

Odorless way found to cook fish, cauliflower and cabbage

CANAPAR IS A PRODUCT OF HAMILTON FIRM

Lives there a woman, in apartment, duplex or home, who has not at some time or other reluctantly foregone fish, cabbage, and cauliflower because of the odors they give off when being cooked? Or who has not suffered from other people close by who cooked these foods regardless?

Canapar entirely does away with this annoyance. More than that, it actually improves flavor and food value. Cooking in Canapar parallels the famous French method of simmering and confining food and its flavours to the closed casserole.

Canapar comes in large sheets, in a handy-size package. When boiling vegetables you simply wet the sheet of Canapar and make a bag similar to a pudding bag. If you are steaming them you line your steamer with Canapar, arrange food and seasoning, and fold back corners of the Canapar to prevent steam from dripping back.

Boiled or steamed fish is particularly delicious done this way. No fishy odor in the kitchen, no gummy kettle to clean. When roasting meat, line the pan with Canapar. It prevents the fats and juices from burning, and eliminates scouring of the pan afterwards.

Canapar saves fuel. You can cook three vegetables simultaneously in the same saucepan with it, without intermingling of flavors. And it is very economical. Just rinse the sheet after using it, hang it on the towel rack to dry. Use it over and over again.

Lots of women use Canapar for a dish cloth—it is so silky and satisfactory and does not spread lint. This is a particularly good use if you happen to pierce the sheet of Canapar while testing the food during the cooking of it. Canapar is made by the makers of PARA-SANI the famous heavy waxed paper in the Green box.

Special Offer

Most grocers, druggists and department stores sell Canapar. If yours doesn't, send the coupon direct and we'll give you a new and unique book entitled "Leftovers" containing one hundred recipes as a bonus for your trouble.

Appleford Paper Products, Ltd., Hamilton, Ontario.
Enclosed find 25c for which please send me one full-size package of CANAPAR Cookery Parchment and your 100 recipes for "Left-overs."

He paused a moment, then abruptly swung round on his heel and, without a word of farewell, strode away across the garden towards the gate by which he had entered.

As the latch clicked into its place behind him, Jean was conscious of a sudden tremor, of a curious, uncontrollable fear, as though his words held something of prophecy. The man's dominating personality seemed to swamp her, overwhelming her by its sheer physical force.

The remembrance of her sinister dream, and of the dream-Burke's threat: "It's too late to try and run away. If you don't come into my parlour, you'll be stamped with the mark of the beast forever," returned to her with a disagreeable sense of menace. She shivered a little and, picking up her basket, almost ran back to the house, as though seeking safety.

CHAPTER XVIII.

Cross-Purposes

In the task of arranging her roses in the various bowls and vases Baines had set in readiness for her, Jean found a certain relief from the feeling of terror which had invaded her. Something in the homely everydayness of the occupation served to relax the tension of her mind, keyed up and overwrought by the stress of her interview with Burke, and it was with almost her usual composure of manner that she greeted Blaise when presently he joined her.

"I've raided the rose-garden today," she said, smilingly indicating the mass of scented blossom that lay heaped up on the table. "I expect when Johns finds out he will proceed to meditate upon something for my benefit with boiling oil in it."

Johns was one of the gardeners to whom Jean's joyous and wholesale robbery of his first-fruits was a daily cross and affliction. Only chloroform would ever have reconciled him to the cutting off of a solitary bloom while still in its prime.

Blaise regarded the tangle of roses consideringly.

"I wonder you found time to gather so many. When I passed by the rose-garden, you were—otherwise occupied."

The quietly uttered comment sent the blood rushing up into Jean's face. When had he passed? What had he seen?

She kept her eyes lowered, seemingly intent upon the disposition of some exquisite La France roses in a black Wedgwood bowl.

"What do you mean?" she asked negligently.

Tormarin was silent a moment. Had she looked at him she would have surprised a restless pain in the keen eyes he bent over her.

"Jean"—he spoke very gently—"have I—to congratulate you?"

It was difficult to preserve her poise of indifference when the man she loved put this question to her, but she contrived it somehow. Women become adepts in the art of hiding their feelings. The conventions demand it of them.

Jean's answer fluttered out with the airy lightness of a butterfly in the sunshine.

"I am sure I can't say, unless you tell me upon what grounds?"

"You know of none, then?"—swiftly.

"None."

She nibbled the end of a stalk and surveyed the Wedgwood bowl critically. Tormarin felt like shaking her.

"Then," he said gruffly, "let me suggest you revise your methods. The woman who plays with Geoffrey Burke might as safely play with an unexploded bomb."

His voice betrayed him, revealing the personal element behind the proffered counsel.

Jean glanced at him between her lashes. So that was it! He was jealous—jealous of Burke! At last something had happened to pierce the joints of his armour of assumed indifference! Her heart sang a little paean of thanksgiving, and all that was woman in her rose bubbling to meet the situation. In an instant she had recaptured her aplomb.

"I think I rather enjoy playing with unexploded bombs," she returned meditatively. "There are always — possibilities—about them."

"There are"—grimly. "And it is precisely against those possibilities that I am warning you."

"Don't you think it's rather bad taste on your part to warn me against a man who is admittedly on terms of friendship with you all?"

"No, I don't"—steadily. "Nor should I care if it were. When it's a matter of you and your safety, the question of taste doesn't enter into the thing at all."

"My safety?" jeered Jean softly. (It was barely half an hour since Burke had inspired her with that sudden fear of him and of his compelling personality!)

"Well, if not your safety, at least your happiness," amended Burke.

"It's very kind of you to interest yourself, but really my happiness has nothing whatever to do with Geoffrey Burke."

"Is that true?"

He flashed the question at her, and there was that in his tone which set her pulses athrill, quenching the light-hearted spirit of banter that had led her to torment him. It was the note of restrained passion which she had heard before in his voice, and which had always power to move her to the depths of her being.

"Perfectly true." She faltered a little. "But"—forcing herself to a defiance that was in reality a species of self-defence—"I fail to see that it concerns you, Blaise."

"It concerns me in so far as Burke is not the sort of man that a woman can make a friend of. It's all or nothing with him. And if you don't intend to give him all, you'd better give him—nothing."

His glance, grave and steady, met hers, and she knew then, of a certainty, that he had witnessed the scene which had taken place in the rose-garden, when Burke had held her in his arms and the flood of his passion had risen and overwhelmed her. He had witnessed that—and had misunderstood it.

She was conscious of a fierce resentment against him. It mattered nothing to her that, in the light of her nonchalant answers to his questions, he was fully justified in the obvious conclusion he had drawn. She did not stop to think whether her anger was reasonable or unreasonable. She was simply furious with him for suspecting her of flirting—odious word!—with Geoffrey Burke. Well, if he chose to think thus of her, let him do so! She would not trouble to explain—to exculpate herself.

She regarded him with stormy eyes.

"Please understand, Blaise, that I want neither your advice nor your criticism. If I choose to make a friend of Geoffrey Burke or of any other man—I shall do so without asking your permission or approval. What I do, or don't do, is no business of yours."

(To Be Continued.)

Makes a Good Story

Biographer Says German Spy Sent Kitchener To His Death

How the German espionage system planned the sinking of the "Hampshire" and the death of Lord Kitchener is related in "The Man Who Killed Kitchener," which has just been published.

The book, by Clement Wood, an American, is a melodramatic version of the life of Fritz Joubert Duquesne, who was undoubtedly one of the German spies who operated against the Allies during the war.

Clement Wood is not content to confine himself to officially authenticated details of Duquesne's picturesque career, but portrays him as the "daredevil hero" of a hundred and one lurid adventures for which he was never given credit.

According to Mr. Wood, Duquesne was actually in the "Hampshire," impersonating a Russian count, when the warship was sunk.

The author's story is that a Russian nobleman, Count Boris Zakrevski, was sent to England on a secret mission to arrange for Kitchener's visit to Russia. The Germans, he claims, got wind of this because a lady friend of Zakrevski's betrayed him. The count was kidnapped and Duquesne went to England in his stead and embarked on the "Hampshire" as a member of Kitchener's entourage.

A delightfully ingenuous story is told by Wood of how Duquesne was to communicate with German submarines. He had been supplied by von Tirpitz' staff with a book of message sheets, "the top half of each painted with a luminous substance."

Such messages were to be picked up, and the submarine which found them was to communicate with the rest of the cordon, and "undersea boats would converge to the attack."

Everything went according to plan. The "Hampshire" was sunk and Duquesne in some remarkable way escaped on a raft, to be rescued by a handy German submarine.

This and many other remarkable exploits are supposed to have been told to the author by Duquesne himself, whom he met in Martinique, where the master spy was posing as Major Reginald Anson.

Liberation Of Humanity

Scientists Hope To Overcome Ravages Of Tuberculosis and Pneumonia

Liberation of humanity from the ravages of tuberculosis and pneumonia through vaccination of children was held out as a probable development of pathology within the next few years.

Dr. John A. Kolmer, Philadelphia, internationally known immunologist, reported progress in both American and European experiments with vaccines for the two diseases in his address before the Southern clinical society meeting in Dallas, Texas.

A Combination Weapon

A weapon combining the features of arrows and bullets has been invented by an archer in California. The arrows are equipped with explosive tips which will kill whatever game they strike. The arrows may be refitted with tips after once used.

Believed to be that of Nero the Roman emperor, a marble statue six feet in height, has been found at Anzio, Italy, which is on the site of the ancient city of Antium.

"He is a brave man who is so determined to have faith in the things he believes in that he is not afraid of appearing ludicrous."

Hubby—You didn't have a rag on your back when I married you.

Wife—Anyway, I have plenty of them now.

There are camphor trees more than 1,000 years old on the Island of Formosa.

Utterly Worn-Out

Mrs. Fitzpatrick Tells How Dr. Williams' Pink Pills Made Her Well.

Can Now Run Upstairs.

"I became run-down and unable to do my work for a family of seven," writes Mrs. W. P. Fitzpatrick, Marquis, Sask. "I was told I had anaemia, and I took treatment, but with very little improvement. Finally my sister, who had had the same disease, advised me to try Dr. Williams' Pink Pills as they had done her so much good. I have taken seven boxes. Today I'm well; able to do my own work; no more tired feeling or weak spells. I can run upstairs without puffing. I sleep and eat well. My friends are astonished at my changed appearance and never fail to ask what I'm taking. My reply is, 'Dr. Williams' Pink Pills.'"

Dr. Williams' Pink Pills actually create an abundance of new red blood, which is the reason why they have given new vitality and strength to thousands of such nervously exhausted and overtired women. Equally helpful for growing girls. Try them. At your druggist's in the new glass container. 50c a package. 273

Felt-Coated Steel Is Newest Material

Will Permit Imitation Of Silken Surfaces, Is Claim

Felt-coated steel, a new material, is announced by the Mellon Institute Research at Pittsburg.

The felt coating of metal opens a world of new commercial possibilities. It means that for many practical uses steel can be covered with all sorts of protective or attractive finishes, even to the imitation of a silken surface.

The new laminated metal was developed by Dr. A. W. Coffman. By the use of alloys the hitherto alien materials are made an integral part of the steel, on one or both sides.

"This metal," says Dr. Coffman's report, "affords flexibility of protection against a variety of corrosive agencies, a fact that will no doubt create many uses other than as roofing and siding for building construction. Excellent pipe line protection should be provided. Paneling for a large number of purposes, fireproof material for fire doors and the manufacture of novelties also come within the score of possible applications."

New Typewriter Invented

Machine For Writing Music Has Fifty-Three Keys

Notes and clefs of musical compositions will be pounded out with the same ease and facility as the words of an author's novel, if plans for a "musical typewriter," launched at Rochester, N.Y., by Mr. Emanuel Rubenstein and his brother, Enoch, of Syracuse, materialize.

The Rubenstein brothers are negotiating with a company here for the manufacture of a 52-key machine, pending approval of patent papers already filed in Washington. Besides containing every symbol known to music, the typewriter will be provided with a ratchet on the line shifter by which the composer can write notes up and down the scale without changing the line.

Holland's Air Line Thriving

Company Has Placed Order For Five Commercial 'Planes

Urgent need for the greater speed and larger passenger accommodation on the 9,000-mile weekly air service between Amsterdam and Batavia, explains an order for five big three-engined commercial airplanes, which the Royal Dutch Airlines placed recently.

It also emphasizes the fact that air traffic, as far as the Royal Dutch Airlines are concerned, is thriving in spite of seemingly adverse economic conditions. The machines will be of the latest type, equipped with American engines.

Talkies are to be produced in Czecho-Slovakia.

When PAIN Comes

WHAT many people call indigestion very often means excess acid in the stomach. The stomach nerves have been over-stimulated, and food sours. The corrective is an alkali, which neutralizes the acids instantly. And the best alkali known to medical science is Phillips' Milk of Magnesia.

One spoonful of this harmless, tasteless alkali in water neutralizes instantly many times that much acid, and the symptoms disappear at once. You will never use crude methods when once you learn the efficiency of this. Go, get a small bottle to try.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. 50c a bottle—any drug store. (Made in Canada.)

Could Compete Against Foreign Radio Programs

If Government In Canada Had Control Of Broadcasting

Against the invasion of the home by foreign advertising over the air, Canada is so far not equipped to offer effective opposition. There are many powerful stations across the border, and they flood out the small stations in this country. Alberta offers an excellent example. With half a dozen stations of very moderate broadcasting efficiency, this Province is deluged by American programmes, most of which are sponsored by private interests intent on advertising goods. It is apparent, in view of the inadequacy of the present Canadian broadcasting effort that a national system of broadcasting will have to be organized to compete against foreign programmes. The type of sales-promoting across the border gives the best reasons why Canada should endeavour to avoid continuance of private radio control. Government control provides a way of escape.—Calgary Herald.

THE RHYMING OPTIMIST

By Aline Michaelis

VISIONS UNATTAINED

The dearest thing is ever what we lose,
By some perversity of human mind,
Forever that which man in vain pursues
Is loved, though but an echo on the wind.
This trait is something stronger than the will,
Which, if it could, would follow reason's way;
But must instead go on, unquiet still,
In quest of phantoms and of dreams astray.
Yet in the end we find it better so;
Desires ungrasped and visions unattained
Lift up man's thought from these dark realms below
Until a glimpse of Paradise is gained.
Better than the unstirred, unquickened breast,
Are weary feet, and rapture of the quest.

Persian Balm invests every woman with subtle charm. Delicately fragrant. Cooling and healing. Dispels all roughness or chafing. Makes skins delightfully soft-textured. Every woman should use this peerless toilet requisite. Daintiness—beauty—refinement—Persian Balm achieves these in every instance. Softens and whitens the hands. Promotes clear and youthful loveliness. All women who care for additional charm unhesitatingly choose Persian Balm.

Russia Has Largest Ball-Bearing Factory

Is Independent Of Rest Of World In This Respect

The new Soviet ball-bearing factory, designed ultimately to be the largest in the world, is now operating.

The first section of the factory, which was built during the last twelve months under the supervision of foreign specialists, will have an annual capacity of 24,000,000 bearings of which 3,000,000 are slated to be produced this year. It is equipped with the latest foreign machinery.

Moscow newspapers hailed the opening of the first section as the beginning of Soviet independence of ball bearing imports which heretofore have cost Russia millions of dollars a year.

An Unusual Complaint

There was quite a flurry at the Lincoln Hotel in New York the other night. A guest complained at 1 a.m. that he couldn't sleep; his bed was too soft.

"Too soft?" exclaimed the desk clerk.

"Yeah, too soft. I've been trying to get to sleep for more than an hour."

The hotel started a futile search for a suitable bed. Finally the problem was put up to Manager Roy Moulton. He ordered some planks brought up from the carpentry shop. The planks were inserted between the spring and the mattress.

The guest tried the bed again. "That's better," he said. He reported the next morning that he had slept soundly. He stayed in the hotel three nights and there were no more complaints.

Miller's Worm Powders destroy worms without any inconvenience to the child, and so effectually that they pass from the body unperceived. They thoroughly cleanse the stomach and bowels and leave them in a condition not favorable to worms, and there will be no revival of the pests.

Shipping Clerk (reading report of cabinet minister's speech)—I hope this is true. He says that the battle against depression is won.

Colleague—Let's show that to the boss and perhaps he will cease firing.

It is predicted that electronic tubes which serve as miniature red and green traffic lights will be installed on the dash board of automobiles of the future.

Civil aviation in China is limited to commercial flying and demonstration flights—private flying is not allowed.

Bank Robbery—Four Murders—Doctor Killed

The wounded bandit in custody *His mark caught him*

Bandit Left His Mark

On May 28, 1928, four bandits robbed a bank in Lamar, Colorado. They killed two officers. Then, in escaping with a wounded bandit, they killed the doctor who treated the wound. This atrocious crime aroused two states to action.

The leader of the gang left his finger print on the glass of the doctor's car. Police records proved that this mark belonged to a robber who called himself, among other names, Jake Fleagle. Thus the whole gang was identified, and three were hanged.

Fleagle himself, after a chase of two years, was wounded in resisting arrest and later died. All because a finger touch left its print on a piece of glass.

So You Leave Marks

This is told to indicate how you leave imprints on everything you touch. Those imprints are germ-laden. You leave them on the toast you butter, on a piece of cake, on a stick of gum.

The germs in those imprints may have been picked up by touching things which others touched with contaminated hands. Life Extension Institute lists 27 diseases which may be conveyed in this way. A cold, for instance, may be passed to many people—by a handshake.

When you carry such germs to your food—by a touch—they breed and multiply. That is something to think about.

Safety and Luxury

Germs, of course, are everywhere, but we can lessen their danger by using Lifebuoy.

Here you have a luxurious toilet and bath soap, based on two palm oils. No soap ever created does more for the skin and complexion. But it also contains an antiseptic.

Do not touch food, or anything which enters the mouth, until your hands are washed with Lifebuoy. Partial germ removal is not sufficient. You must either remove or make inactive the germs that threaten your health. Lifebuoy will do this.

Stops Body Odour

Lifebuoy gives you luxurious, creamy lather. You never used a more delightful soap. But the odour is not a perfume. It's a refreshing scent that spells safety. It disappears in a few minutes, but it tells you that the germs have been washed away from your hands.

Lifebuoy's lather goes deep into the pores of your skin, cleansing them of odour-causing waste. After using Lifebuoy in a bath, your whole body is exempt from offensive body odour for hours. Is not such protection worth more than perfume to you?

Many millions of people, the world over, think so. Your dealer has Lifebuoy for you. Try it today.

A Big Farm Asset

Poultry Comes To Farmer's Rescue In Times Of Depression

Official records show that the poultry population of Canada has doubled each ten years during the period of past thirty years. Each succeeding period of low prices for farm products finds the poultry flock coming to the farmer's rescue. At the present time it can easily be shown that the poultry flock properly bred, housed and looked after is, from the standpoint of capital investment and feed cost, one of the best paying lines of farm effort. Each succeeding year appears to make it more clear that the farm is the logical place for the development of the poultry industry with respect to both egg and meat production. The farm flock is a useful medium for the marketing of otherwise unsaleable products in the form of eggs and poultry meat.

Churchill Is Active

Northern Port Waking Up After Quiet Of Winter

Churchill is taking a new lease on life. Steel workers have arrived and will erect new grain conveyors to aid in pouring grain into holds of grain boats. Later first employees of the Federal Department of Railways and Canals are expected. Dredging of the harbor will be completed as quickly as possible. The townsite railway facilities will be brought up to the standard required to handle the first influx of settlers.

A chemist points out that most foods do not reach their highest possibilities of flavor unless they are sweet, sour, salty and bitter, all four, to the taste.

The British war tank that runs on land and water has been made possible by the invention of watertight joints.

Little Helps For This Week

"The gift of God is eternal life through Jesus Christ our Lord." — Romans vi. 23.

When Heaven grows dim and faith seeks to renew
The image of its everlasting dower,
I know no argument so sweet as through
The bosom of a flower.

A wicket-gate to Heaven (of which death
Is the grand portal, sealed to mortal eyes),
Between whose little bars there comes the breath
Of airs from Paradise.

To the thoughtful mind the lily-blossom is a wicket in the great, unseen portal of death, through which we may obtain bright glimpses of what is beyond. It opens in all its snowy purity and exquisite grace from the dry, withered sheaf, as the transfigured immortal life bursts from the temporary imprisonment of death. And if the death of the plant should thus blossom into undreamt-of beauty, what infinite possibilities better than our brightest hopes are held by that darkness which bounds our vision here! He who raises up the lilies every summer, each from its own root in the mould, will not leave our life in the dust.—Hugh MacMillan.

Your Home Medicine Chest. — Among the standard household remedies that should always be on hand in your home medicine chest, none is more important than Dr. Thomas' Eclectric Oil. Its manifold usefulness in relieving pain and healing sickness is known by many thousands throughout the land. Always use Dr. Thomas' Eclectric Oil for relieving rheumatic and sciatic pains, treating sore throats and chests, coughs, burns, scalds, cuts, bruises and sprains.

HEAVIEST APRIL STORM ON RECORD

Nearly three and a half inches of rain fell in the Lacombe district in the storm of last week. This beats any record for the past thirty years and the moisture is welcomed by the farmers. A report from Calgary says:

Although rain and snow of varying intensity fell in all parts of the province Wednesday night and Thursday morning, Calgary apparently bore the brunt of the 24-hour snow storm which extended over an area of about 60 miles, with the city as centre.

The foothills districts from Banff to the boundary reported snow, extending from storms to flurries, but as the storm moved east over the prairies the snow appears to have turned into sleet and rain. Cochrane and Cardston experienced snow fall and heavy sleet fell from Calgary to Delbourne and to Rockyford, according to the C.N.R. reports.

Heavy rains were reported from the Edmonton district with probability of snow if the temperature fell lower during the day. In the Peace River area snow was falling during the morning.

About an inch of rain fell in the Hanna district, bringing moisture relief at a critical period. Pasture lands were reported greatly benefited by the downpour.

Snow fell from Beiseker to Calgary but beyond that point rain was the rule, Drumheller reporting the sixth fall during the present month.

Outside half a mile of telephone wires carried down at Kircaldy and telephone wires down at Vulcan and Nobleford, Southern Alberta seemed to have escaped the brunt of the storm which played havoc with wire communication in the Calgary area.

Moisture fell at Lethbridge to the depth of .44 inch and the mercury dropped to 30.

The moisture was welcomed by farmers and livestock growers for its good effect on germination and in giving pastures a good start. Sugar beet seeding had been in full swing during the past week and conditions will now be ideal.

The storm was heavier north and west of Lethbridge, three to five inches of snow cover the ground at High River, Nanton, the whole foothill area as far south as Cardston but the storm gradually snuffed out in the southeastern area. No rain was reported east of Manyberries.

SCHOOL TEACHERS WIN IMPORTANT DECISION

Teachers won a victory over school boards and the department of education Wednesday when the unanimous decision of the appellate division of Supreme Court in the test case of of John Steele-Smith, a school teacher, against the Acme school district was handed down in Calgary.

The court ruled that the new provision of the July, 1930 amendment to the school act was retroactive. In other words it held that even though teachers were employed under a contract complying with the old act, their dismissal must be made in accordance with the provisions of the 1930 amendment, which provides that permission of the school inspector must be granted to make dismissal legal.

Previously all that had been required was 30 days' notice to the teacher following opportunity for him to discuss cause for dismissal with the trustees.

Steele-Smith was dismissed by the Acme school board in June, 1929, under terms of the contract which was drawn according to the old act. He held that this was illegal, since the new act imposed a new requirement that had not been fulfilled, and entered claim for $50 against the school district.

Mr. Justice Ewing upheld his claim, allowing the damages.

The school district entered appeal from the judgment, but the appelate division upheld the trial judge in their decision, Wednesday, ruling that the inspector's permission was neces ary even in contracts under the old act.

ARE YOU A PELICAN?

Calamity howlers, depressionists, blue ruinists, gloom creators, and all people of the kidney had better beware. The Order of the Pellicau is coming. Montreal is tawing to it, and Vancouver is considering it, and there is plenty of space between these two cities for Pelicans to get busy. They are becoming increasingly active in the United States, and, while Canada is not nearly as much blanketed in gloom as that country, there are still some long faces in the Dominion that need broadening.

This how the Order of the Pelicans originated. There are droves of the birds in Santa Monica Bay. They had grown fat because they had been fed by the fishermen. Having food found for them, they had lost the way of getting it for themselves. This year, however has been a bad one for the fishers. They had too little fish for themselves, and the pelicans have grown thin. Now they know what depression means.

The fishermen soon caught on to the idea that the pelicans had forgotten how to catch fish. Thereupon they sent down coast for some birds that still knew the trick of looking after Number One, and these were put among the depressionists. The result was quick. The pelicans on the fishermen's relief fund "backed up" and learned again how to fish for themselves. And now prosperity has returned, and for the at one time glum birds, all is best in this best of all possible worlds.

The moral of this nature story is that a large number of humans have taken the lesson to heart, and are stopping their talk of calamity, depression and dolefulness. They too, are "bucking up" and showing a determination to find fish for themselves. Regina Star

Our Regular Inspection Service Keeps Cars Going!

It's an automobile's job to take you places—and it's *our* job to keep your automobile in condition to *go* when you want it to go.

We're thoroughly equipped to give you that kind of expert, practical service . . . covering batteries, tires, oil and grease, brakes, ignition and electrical troubles . . . drive in for *regular* inspections, *without obligation.*
